LETTER OF TRANSMITTAL

Department of Public Instruction.

Tallahassee, Florida, December 15, 1932.

To His Excellency,
Doyle E. Carlton,
Governor of Florida.

Sir :

In compliance with Section 27, Article IV, of the Constitution of Florida, I have the honor to submit herewith the Biennial Report of the Department of Public Instruction for the two years beginning July 1, 1930, and ending June 30, 1932.

Yours respectfully,

W. S. CAWTHON,
State Superintendent of Public Instruction.

PUBLICITY OF THE PROCEEDINGS OF MEETINGS OF COUNTY BOARDS OF PUBLIC INSTRUCTION

Paragraph nine of Chapter 4332 Acts of the Legislature of 1895 requires that . . . "monthly financial statements shall be certified by the chairman of the board of public instruction for the county and attested by the county superintendent of public instruction, and the said board shall without delay, cause the same to be published in a newspaper of the county where any such newspaper exists, provided that the cost of such monthly publication shall not exceed two dollars a month . . .".

The limit of two dollars placed upon the cost of publishing the statement serves to make the law inoperative at this time admitting that two dollars would pay for the printing thirty-seven years ago when the law was passed.

The public is entitled to the most complete publicity possible with respect to the finances of the common schools. If the people are not to be taken into confidence they should not be expected to respond liberally when called upon to finance an educational program.

The statute should be amended so as to provide for the publication of these financial statements at the current costs of such work.

SCHOOL FINANCES

Much has been said and written in the past few years concerning State school funds in Florida. In many other states, as well as in Florida, leading school men are advocating larger appropriations by the state for school purposes than have been made in the past.

It will be interesting and instructive to note the changes in the amounts of State school funds in Florida in the past few years as compared with those of county and district funds. The following table shows the amount of each of

those funds collected for the public schools in Florida in each of the years from 1927 to 1932:

Year	District Funds	County Funds	State Funds
1926-27	\$ 8,598,123.50	\$6,235,157.54	\$ 853,079.94
1927-28	10,148,279.76	6,214,071.82	1,958,935.83
1928-29	10,152,206.58	5,938,630.15	2,526,477.61
*1929-30	9,869,870.17	5,740,025.67	*4,645,535.78
1930-31	7,906,877.43	4,830,516.19	4,243,419.46
**1931-32	7,211,104.35	3,882,162.63	**6,183,161.58

It will be observed from the table shown above that the district funds dropped from \$8,598,123.50 in 1927 to \$7,211,104.35 in 1932, and that in the same period the county funds fell from \$6,235,157.54 to \$3,882,162.63 while the State funds increased during that time from \$853,079.94 to \$6,183,161.58—an increase of \$5,330,081.64 in five years.

It will be clearly seen from the figures given above that any diminution in school funds in recent years has not been due to one in the State funds, but rather to a falling off in the county and district funds. The county funds in 1932 were only 62% of those collected in 1927; the district funds of 1932 were only 84% of those collected in 1927; while the State funds in 1932 were 724% of those of 1927.

It is true that the State funds were not as large in 1931-32 as some people expected. This was caused partly by the fact that the Legislature of 1931 made an appropriation of \$7,500,000.00, but did not name sources sufficient to produce that amount. The only sources of State school funds now are the One Mill Tax, Interest on the Common School Fund, and the Motor Vehicle License Tax. There is no ad valorem tax for State school funds except the One Mill Tax.

The shortage of county and district school funds arises from several causes:

First, property is not assessed as high in some counties as it was a few years ago.

Second, the county school millage is not as high in many counties as it was a few years ago. Formerly almost every county levied 10 mills, while now many counties are levying from 3 to 5 mills.

Third, property holders in some counties are not paying their taxes as promptly as they formerly paid them.

*State funds for the fiscal year 1929-30 represent collections for 14 months, for the reason that distributions for a part of the year were made monthly instead of quarterly as in previous years.

**Of this amount \$5,538,706.96 was distributed upon the instruction unit basis.

During the school year 1924-25, the contribution from State sources to the maintenance of the schools was less than six hundred thousand dollars. For the second year of the biennium covered by this report there was distributed to the counties by the State for the current expenses of the schools approximately six millions. Yet with this increase of more than ten-fold in seven years, the clamor for more State funds is louder and the number of teachers who are not receiving their salaries promptly is apparently greater than ever before.

As large an element of certainty as possible should be embodied in our laws relating to school finance with respect to:

1. The amount to be apportioned to the counties by the State.
2. The purposes for which this money can be spent by county school boards.

Section Seven of Chapter 14829, and Sections 2 and 21½ of Chapter 14892, Acts of the Legislature of 1931, should be amended so as to provide for:

1. An appropriation that there would be every reason to believe would be made available. A *certainty* of, say, five and one-half millions is better than an uncertainty of 7½ millions.

2. Restrictions upon both the *items* upon which the State funds could be spent and also the *period* for which they could be spent. The items under the head of *current expense* should be actually enumerated in the law and no expenditures for any other items should be allowed from State funds. No expenditures should be allowed for obligations accruing during any years previous to that during which the funds are collected and apportioned.

3. Enforced levies by counties and districts for raising money to pay obligations incurred by these respective units including obligations involving the principal of the State School fund. State funds should be used exclusively for operating schools and not for assisting any county board to pay its past obligations.

4. Penalties on counties in terms of funds withheld for any year for the failure to maintain any school for the required length of term whatever that may be. If part of the money apportioned to a county for any school for any year for, say, a term of six months is diverted, and is not used for the maintenance of that particular school for the

required term, an amount equal to the part so diverted should be withheld from the county the following year.

The people of the State, collectively, may indicate through the Legislature how much they will raise and spend on a *minimum* State program. Each county and district should then decide for itself within the limits of our Constitutional provisions how much it will add to the State appropriation from its resources for the financing of its own program.

Attempts to maintain a program either State or local, or both, beyond the ability and willingness of the people to pay, simply results in eventual repudiation and in the discrediting of the entire system. Placing a mortgage on the future for current expenses is a poor policy.

The public generally claim the right to make an estimate of the value of our schools and very properly decline to delegate that right to teachers and school officers alone.

As an integral part of our social machinery, designed to promote the general welfare, and as a function of government, the school is automatically affected by general economic conditions. It cannot justly claim immunity from the financial ills that affect society as a whole. Those who assume that the educational program will or can go forward without retrenchment in such times as are now upon us are destined to be disappointed.

THE REDUCTION OF SCHOOL EXPENDITURES

The acute financial situation now existing has been productive of widespread complaint against the cost of "non-essentials" and "frills and fads" in the curriculum. If there are non-essentials in the course of study, let the public point them out and require them removed from the course. Some money can be saved by curtailing the offerings, but not any considerable part of the school costs.

Neither teachers nor administrators are responsible for the overloaded curriculum if such exists. The history of the introduction of subjects taught in the schools shows that pressure from without the schoolroom has brought about the expansion of the curriculum. Publishers of textbooks, manufacturers of laboratory apparatus, and other vested interests have doubtless contributed their share to this expansion.

Investigations by the United States Office of Education show that the number of courses taught in high schools

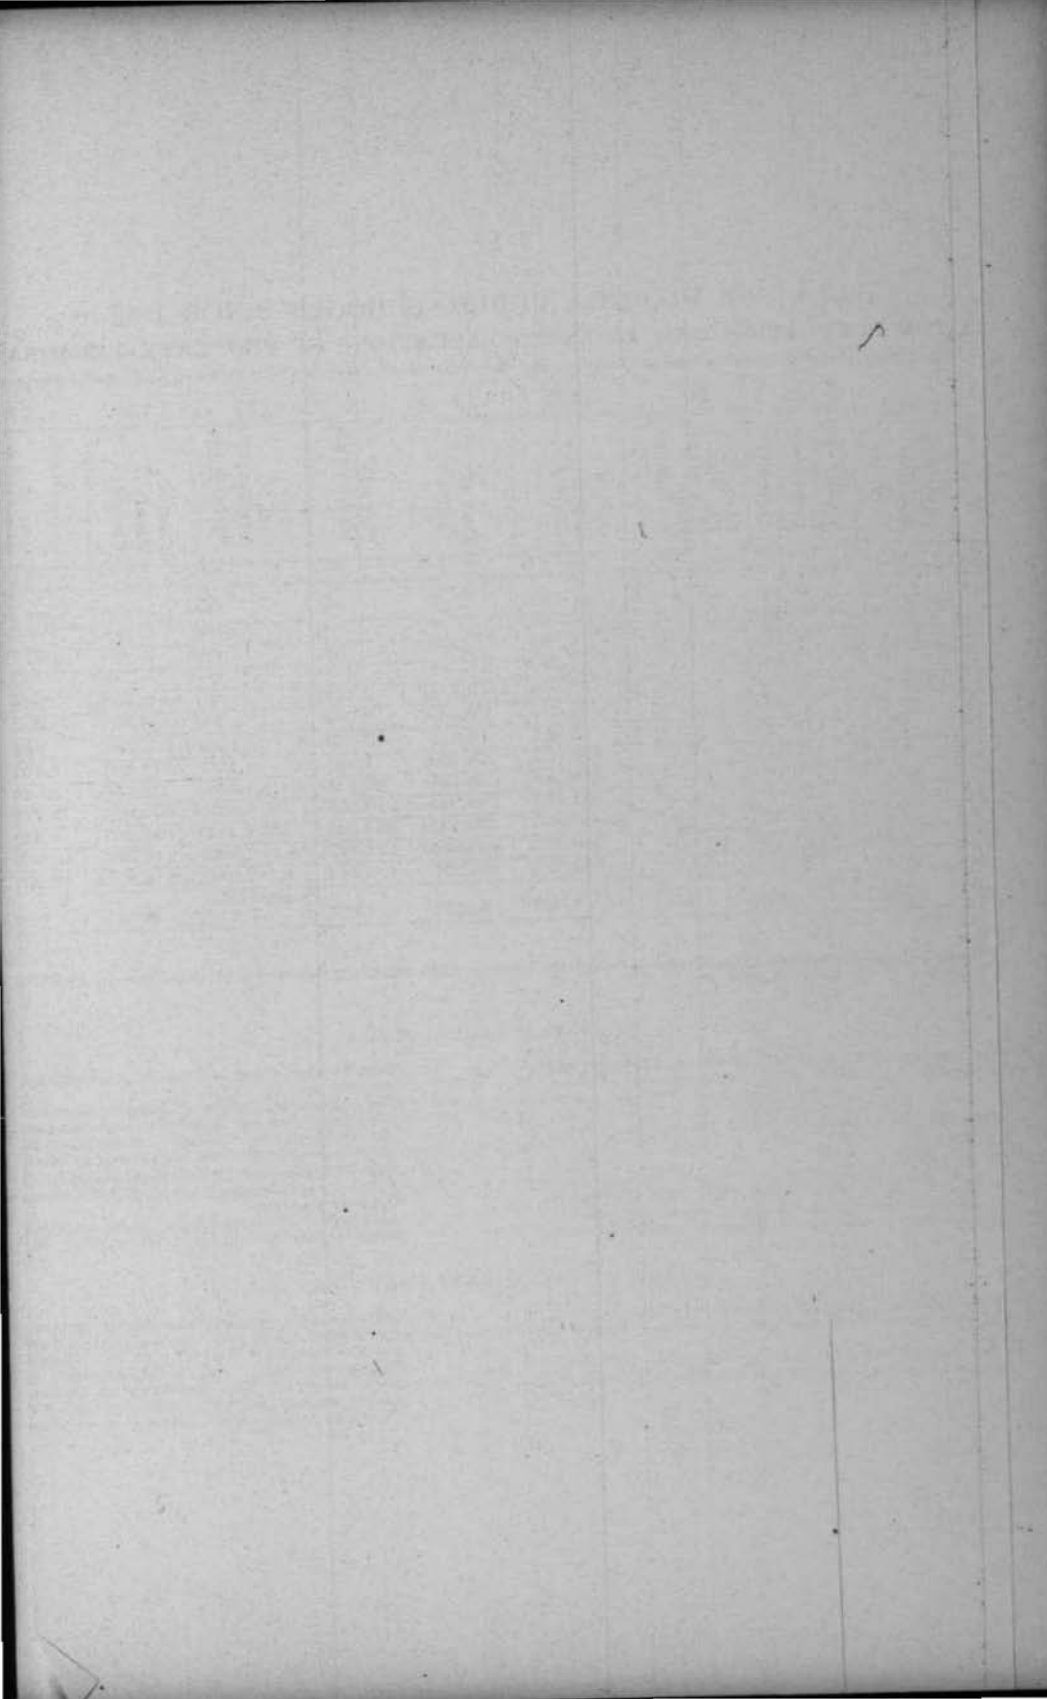

in this country have increased from nine in 1890 to about 250 at this time. A statement by an eminent educator was made recently to the effect that these two hundred-fifty courses could be consolidated into as few as ninety courses without general detriment to high school work.

Florida high schools, especially the smaller ones, could diminish the number of elective courses without seriously impairing the efficiency of these schools.

The following measures of economy are suggested for the consideration of county and district school authorities:

MEASURES OF ECONOMY

1. Reduce the number of small high schools.
2. Allow no teacher, except in a one-teacher school, to have fewer than 30 pupils.
3. In large elementary schools provide one teacher for 35 to 45 pupils.
4. Do not make frequent changes of supplementary readers, but use old readers as long as possible.
5. Pool library books for the entire county, and provide a system of exchange of books, in packages, through the office of the County Superintendent. In like manner provide for the exchange of sets of supplementary readers.
6. Do not allow agents to sell school equipment to local schools, but require that all purchases be made directly by County Boards in open sessions of their regular meetings. Discourage excessive expenditures for sets of reference works.
7. Discourage the sale of jewelry, emblems, etc., by agents to pupils.
8. Discourage undue expenditures on the part of pupils for commencement occasions.
9. Discourage excessive expenditures for playground equipment, but encourage play programs instead.
10. Encourage principals, teachers, and pupils to provide home-made apparatus and equipment wherever possible, and to make simple repairs.
11. Discourage the purchase for small schools of expensive laboratory equipment such as compound microscopes, bell-jars, vacuum pumps, wheatstone bridges, etc. The money spent on a few such pieces of apparatus would provide a large variety of necessary pieces.

*Estimated from partial data.

**No data available.

†Items such as expenditures for "All other Purposes" could not be distributed under budget heads, so were placed under *General Control*, thus making this item larger than it would otherwise have been. Transfers of funds that were not really ex in some measure for the "All other Purposes" item, and may make this and "Total Cost" higher than they should be.

‡Even-numbered years Federal Census; odd-numbered years State Census.

xBased upon costs for *Current Expenses* only.

WHAT THE TABLE SHOWS

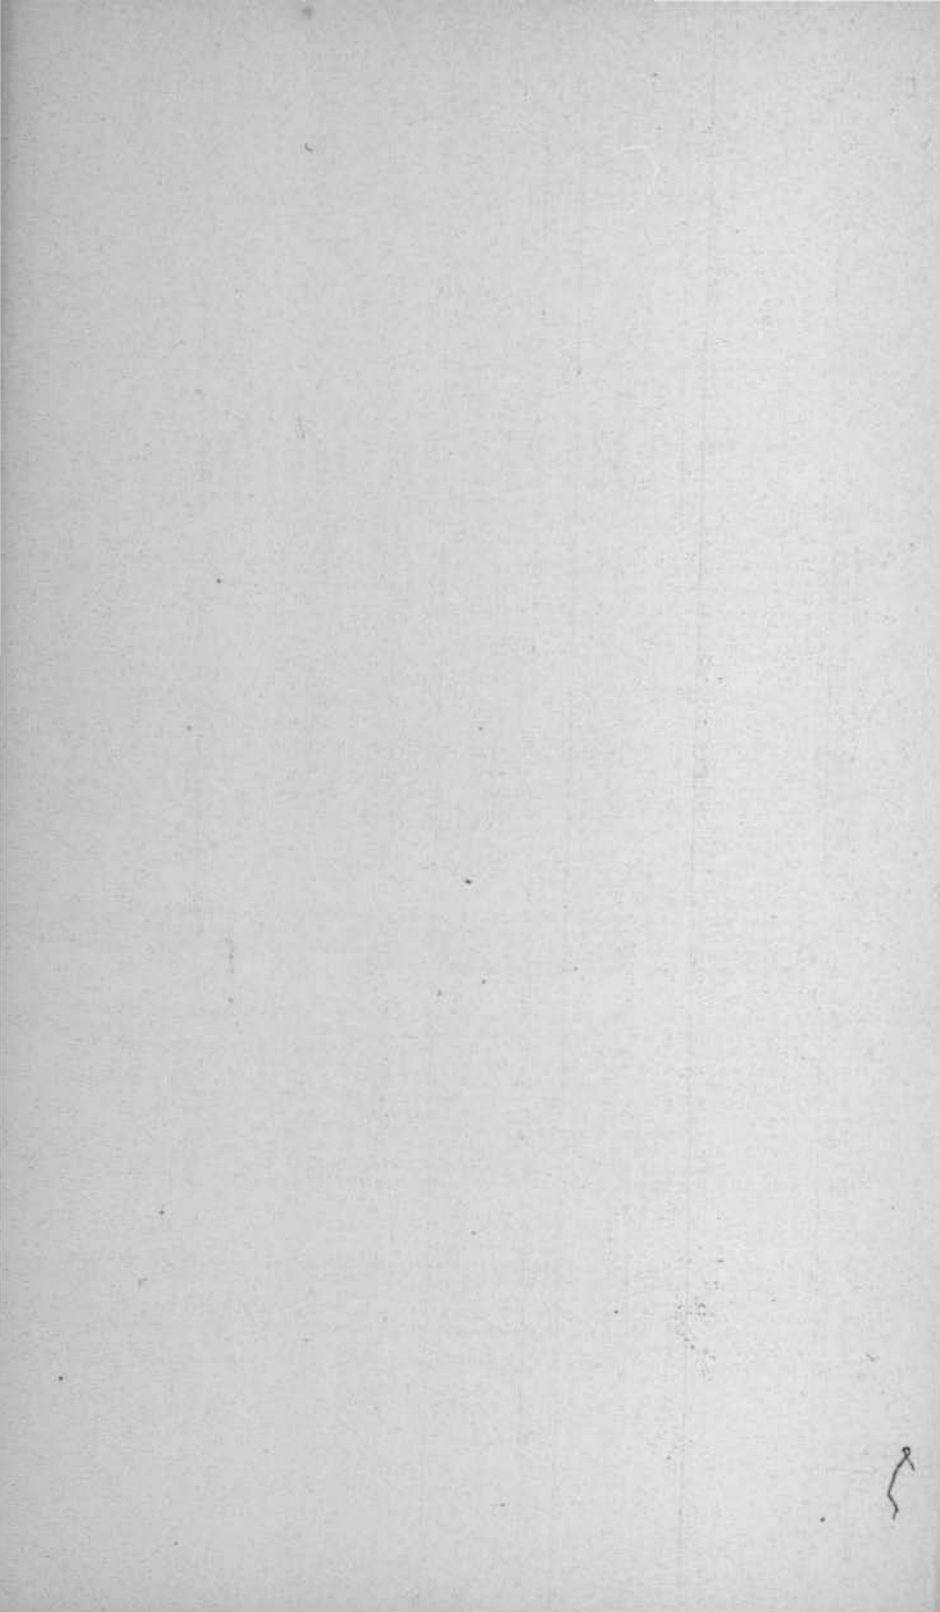

- The *Number of Schools* does not show as much growth as some other items for the reason that consolidation of schools has been operative to a large extent during the time involved. On the other hand Elementary, Junior High School, and Senior High School Departments are just recently counted as separate schools.
- The *Number of Teachers* has increased 314% since 1895.
- The *Enrollment of Pupils* has increased 287% in 37 years, whereas the total population has increased 682% in 60 years.
- The *Average Daily Attendance* has increased 365% in 37 years.
- The *Average Length of Term* has increased from 93 days in 1894-95 to 167 days in 1931-32, or 80%.
- The cost of *Current Expenses* has increased 2210% in 37 years.
- The *Annual Cost per Pupil Enrolled* has increased from \$6.21 in 1894-95 to \$37.02 in 1931-32. The *Daily Cost* has increased from 7 cents per pupil to 22 cents per pupil in that time. This increase is due in large measure to the greatly increased enrollment in high school within the last fifteen or twenty years. (Annual cost per pupil for Continental United States in 1927-28 was \$71.39.)

- The *Annual Cost per pupil in Average Daily Attendance* has increased from \$9.37, or 10 cents a day cents a day in 1931-32.
- The following items of school cost have increased as follows in 37 years: (a) *General Control* 1,033% (b) *Operation* 13,371%; (c) *Maintenance* 5,237%; (d) *Auxiliary Agencies* 5,247% (in 27 years); (e) *Fixed Charges* 9,917% (f) *Debt Service* 19,926%; (g) *Capital Outlay* 1,162%.
- It will be noted that more money was paid in 1929-30 for *Debt Service* than for *Instruction*.
- The *Principal of the Common School Fund* has increased 1,982% in 62 years.
- Total Cost* of schools in 1929-30 was almost double the cost of *Current Expenses* due to the very large *Capital Outlay*.
- Assessed Valuations* have increased 1,649% in 62 years.
- Total Costs* have increased 3,201% in 37 years.

COLUMN HEAD EXPLANATIONS

- General Control*: (a) Salaries of Superintendents; (b) Traveling expenses of Superintendents; (c) Incidentals of Boards and Superintendents' offices; (d) Printing; (e) Expenses of teachers' examinations; (f) Per diem and mileage of school boards; (g) Commissions paid tax assessors and collectors.
- Instruction*: (a) Salaries of teachers, principals, and supervisors; (b) Payments for institutes and summer schools; (c) Free textbooks; (d) School libraries, salaries and upkeep; (e) Classroom supplies and other expenses of instruction; (f) Payment of tuition for county-line pupils.
- Operation*: (a) Wages of janitors; (b) Fuel, water, light, power, janitors' supplies, etc.

- Maintenance*: Repairs, replacements, and other upkeep charges.
- Auxiliary Agencies*: (a) Transportation; (b) Promotion of health; (c) Attendance officers.
- Fixed Charges*: (a) Rent; (b) Insurance.
- Capital Outlay*: (a) New grounds; (b) New buildings; (c) New equipment.
- Debt Service*: (a) Interest on loans, bonds, or warrants; (b) Payments for retiring loans, bonds, where money is borrowed and paid back during the same year).
- Current Expenses*: All expenses except *Capital Outlay* and *Debt Service*.

SOME COMPARATIVE FIGURES

Circular No. 11, of the Research Division of the National Education Association, dated November, 1932, contains some interesting data with reference to the schools of the various states, and from this information the following ranking of Florida for the school year 1930-31 for certain items was made.

How Florida Ranks

	*Rank
Percentage of Pupils Enrolled that are in average daily attendance	36th
Average Number of Pupils in Average Daily Attendance to each teacher	25th
Average Salaries of Teachers, Principals, and Supervisors..	43rd
Annual Cost for Current Expenses per Pupil in Average Daily Attendance	39th
Annual Cost of Instruction per Pupil in Average Daily Attendance	40th
Total Annual Cost per Pupil in Average Daily Attendance....	40th

**Annual Cost per Pupil in Average Daily Attendance for
Continental United States and for the Southern
and Border States**

(For Total Current Expenses)

Continental United States.....	\$86.52
Maryland	79.94
West Virginia	72.18 ^a
Missouri	70.28 ^a
Oklahoma	62.95
Texas	59.03
Florida	49.74
Louisiana	47.06
Virginia	43.26
Tennessee	42.66 ^a
North Carolina	41.22
South Carolina	36.76
Mississippi	36.13 ^a
Arkansas	36.05
Alabama	35.67
Georgia	31.89 ^a

TEACHERS PENSIONS

Under Chapter 14782 Acts of 1931, the pension roll is growing apace.

^a Data for 1929-30. More recent figures not available.

* From highest to lowest, viz: 1 is highest, 48 lowest.

It is suggested that the law either be repealed or amended so as to provide for the granting of a pension to no person who is under sixty-five years of age.

Generally speaking, statutes providing for the pensioning of teachers embody plans whereby those who become beneficiaries are required first to contribute to a pension fund.

The advisability of replacing the present statute with a new one more in line with those reputed to be the best in the country is suggested.

SCHOLARSHIPS IN THE UNIVERSITY OF FLORIDA AND IN THE FLORIDA STATE COLLEGE FOR WOMEN

Under the system of competitive examinations now administered by the State Board of Education through the office of the State Superintendent of Public Instruction it is possible for a considerable number of students to obtain the county and senatorial scholarships who are not in financial need of the same. It is also possible for unworthy persons to win these scholarships.

The Act whereby the scholarships were created should be repealed or changed so as to benefit worthy and needy students in all cases.

Many holders of county scholarships do not seem to take seriously the obligation to teach two years or to return to the State the money used. Some of these holders appear to regard teaching as a penalty, and so indicate. After having used the money provided by the State, they attempt to meet the obligation by teaching less than the time required by law. Others will not answer inquiries from the office of the State Superintendent as to whether or not they have taught the two years.

If the State continues to spend money in this way, the distinction between Senatorial and County Scholarships should be abolished. Under existing conditions there is a much greater demand for the former because of the fact that the holders are not required to register in any particular college or to enter any specific vocation.

Since the Board of Control has direct oversight of all matters relating to the internal administration of the University of Florida and of the Florida State College for Women, and since that board administers all other scholarships, the logical thing to do appears to be to relieve the State Board of Education of the administration of the County and Senatorial Scholarships and to place the same under the Board of Control.

THE CERTIFICATION OF TEACHERS

The Survey Commission in its report to the Legislature of 1929 recommended the repeal of the present certificate law and the enactment of a law more in line with the present trend in teacher-training and teacher-certification. For

the convenience of the reader a reprint of this part of the Survey Report is given here.

If certification is contingent upon specified levels of training the professional preparation of teachers is automatically cared for. The present certificate law in Florida provides for three main types of certificates: Certificates on Graduation, Certificates by Examination, and Temporary Certificates. The trend in most of the states is definitely toward the graduate certificate and away from the examination system. The importance of professional training has become exceedingly cumbersome, so wide a range of subjects, often embracing a full program of elementary high-school, college, and professional subjects.

The policy of issuing life certificates discourages continuous professional training and offers a serious obstacle when standards are raised. Temporary certificates should be for an emergency measure only. In Florida these certificates are all too common, as the supply of trained teachers is in general sufficient to meet the demand.

Recommendations for training and certification follow:

1. That the present law relating to teachers' certificates be repealed and that the State Department of Education be given authority to formulate rules and regulations for certification without being limited by specific provisions for details in the law itself. This will allow modifications in the regulations in harmony with changing ideals and improved conditions.
2. That the State Department revise the present plan of certification along the lines suggested in the accompanying report.
3. That all certificates and renewals be based upon credentials from approved training institutions.
4. That the examination system be abolished.
5. That the period of validity for all certificates be limited to not more than five years, extension and renewal to be based upon additional training or successful experience, or both.
6. That the candidate be at least eighteen years of age.
7. That within a reasonable length of time, determined by the State Department, teachers holding certificates now requiring less than standard training show evidence of having met the new requirements.

These findings of the Survey Staff are heartily endorsed except in two particulars which are as follows:

1. Although the present unwieldy and expensive examination is needed less each year, it is not felt that the State is as yet quite ready to abandon teachers' examinations entirely. Rather the number of kind of certificates based on examinations should be reduced from six to two, and one examination each year should replace the three now held. This one examination might well be given late in August or early in September.

2. Teachers now certified (Item 7 of the recommendations) should be encouraged, but not required, to meet the higher standards. There should be nothing in the new law to affect the validity of a certificate that has been issued.

Should the Legislature find it inadvisable to enact a simplified certificate law based on the report of the Survey Commission, amendments to the present law to effect the following changes seem imperative:

1. The curtailment of the examination system.
2. The elimination of life certificates. (No such certificate to be issued after a specified date.)
3. A reduction in the number of out-of-state teachers certified.

Florida teachers have long needed some protection from the tourist teacher, but the present nation-wide oversupply of teachers makes the third change mentioned more necessary than ever before. This end may be accomplished in one of two ways:

1. By requiring an examination of out-of-state graduates. (This method is now used in licensing lawyers.)
2. By making graduates of out-of-state institutions eligible for only one type of graduate certificate—that to be based on graduation from a four-year course of a college accredited by the Association of American Universities.

Of the two, the latter method seems preferable.

As stated above the trend of certification in Florida is definitely toward certificates granted upon graduation from accredited colleges, and away from those issued as a result of examinations. This is shown in the table given below. It will be observed from this table that there has been a decrease in the number of certificates of low rank earned by examination, and an increase in that of graduate state certificates under the present certificate law which has been in effect since 1923.

Figures showing the *decrease in certificates of low rank* which are earned by examination, and the *increase in Graduate State Certificates* granted upon graduation from accredited colleges. (Under present certificate law, 1923-1932, inclusive.)

THE COST OF TEXTBOOKS USED IN FLORIDA

During the past year there has been more discussion than usual over the State relative to the prices of the school books used in Florida. The statement has been made repeatedly in public that the "book trust" controls the prices of the texts furnished our children, and that our people pay more for these books than do the school patrons of other states. The terms "racketeering" and "graft" in connection with the book business have been liberally used.

Sections 14 and 17, of Chapter 8500 Acts of the Legislature of 1921 require appropriate publicity on the part of the Governor and of the State Superintendent of Public Instruction respectively, of the transactions incident to book adoptions and book contracts. Notwithstanding the fact that there has been compliance with this statute, there seems to be a general misunderstanding of the book transactions as conducted by the State School Book Commission and the publishers.

Section 9 of the Chapter above cited contains the provision that "each contract prepared and executed shall provide that when any book or books covered by any such contract shall thereafter during the life of such contract be contracted for in any other State of the United States at

a lower contract retail price fixed by the publisher than is designated in such contract for such book or books, the same contract retail price fixed by the publisher shall immediately become the price of such book or books in the State of Florida."

Pursuant to this provision the following changes in prices have been made this year to Florida patrons:

Title	Publisher	Contract Price	Present Price
Literature and Life, Book Four.....	Scott, Foresman and Company....	\$2.07	\$1.90
Webster's Collegiate Dictionary—			
Buckram binding..	G. and C. Merriam Company.....	6.00	5.00
American Literary Readings with Introductory History of American Literature	Rand McNally & Co.....	2.15	2.07

But the question arises as to any contract retail price made for Florida on a book for which a similar contract *already exists* in another State. In this case there is no way to force the publisher to give Florida the same price that exists elsewhere. The State School Book Commission has recourse only to the principle of competitive bidding. The publisher may or may not make as low a price to us as he has already made elsewhere. There is no way for us to compel him to do so. He is not at all likely to do it if he would lose money by such a course, either through the necessity of reducing his price elsewhere or through an increase in the cost of paper, binding, labor, etc., subsequent to the time at which the contract in question was made.

It would be to the interest of the publisher to compare prospective losses elsewhere with the loss of the business that he might get in Florida by lowering the price made to that State.

In an effort to clarify the situation the following tabulation has been prepared for the purpose of enabling those who may be concerned to compare the contract retail prices of books adopted for Florida with those of the same books sold elsewhere under the same kind of contract. No attempt is made to set up a comparison unless the contract retail prices are known for both Florida and for at least one other state.

Although the cost of school books is negligible in comparison with that of public education as a whole, it behooves those charged with the responsibility of handling the book business on the part of the State to obtain the best contracts possible for the public, keeping in mind the fact that the best books are the cheapest in the long run, and also being mindful of the falsity of the saying that "one book is as good as another."

The Florida law does not limit the profit to be made by the retailer as do the statutes of certain other states. It might be well for our Legislature to consider such an amendment to our law as would establish a maximum retailer's profit on the wholesale price fixed by the publisher f. o. b. the shipping point. Closely related to this question is that of the profits made by the central and local depositories that are now required by our statute. As the law now stands, school patrons must contribute to the profits shared by both the central and local depositories. Whether a system can be formulated whereby the central depository can be eliminated, or better still, whereby the cost of both the central and local depositories can be saved to the taxpayers remains to be determined.

FREE TEXT BOOKS

Free text books have been used in the first six grades in Florida for the past six years. Not only the parents of the children who use them, but the tax payers as well, will be interested in knowing something about the cost of these books, especially the economy of the system used if there is economy in it, and other features incidental to the free text book law. The first books were purchased for the school term 1926-1927. The cost for books for this year was \$413,368.60, the highest of any year since the law went into effect. Below is shown a table giving the cost of free books each year since 1926:

FREE TEXT BOOKS					
Year	Enroll. First Six Grades	Cost of Books	Cost per Pupil	Incidental Expenses	*Amount Remitted to Treas.
1926-27	230,498	\$413,368.60	\$1.79	\$3,166.35	\$1,362.22
1927-28	287,139	368,510.88	1.28	227.93	975.43
1928-29	259,933	97,438.89	.37	528.50	941.27
1929-30	256,050	93,111.35	.36	1,039.77	842.52
1930-31	255,608	108,689.64	.42	803.35	685.94
1931-32	267,593	117,329.89	.43	100.66	343.36
1932-33	Incomplete	309,562.54	Incomplete	Incomplete	Incomplete
		\$1,508,011.79		\$5,866.56	\$5,150.74

*Section 10, Chapter 10254, Acts of 1925 requires that money collected for books lost or destroyed during the school year be remitted by county superintendents to the State Treasurer.

It will be seen from this table that the cost per pupil for free books has been greatly reduced since 1928. This is partly due to regulations passed by the State Text Book Commission in June, 1929, one of which required that all county superintendents, when making requisition for free books, report the number of usable books on hand in each county. Another regulation made required that in estimating the enrollment of any grade, a number not exceeding the enrollment of the next grade below should be taken. A third regulation required that all free books should be used not less than two years. This last regulation was revised on April 23, 1932, by the Text Book Commission and reads as follows: "Books used in the First Grade may be replaced at the expense of the Free Text Book Fund after one year, and those used in the other grades may be replaced after three years with the exception of dictionaries. The latter may be replaced after five years."

As shown by the table above, the cost of free books for the school year 1932-1933 was \$309,562.54. The large increase in cost over that of the previous year was due to the fact that the new State adoption of elementary texts was made in January, 1932, and became effective in July, 1932. It will be seen, however, that the cost of books for this year was less than for 1926-1927. This was due to a regulation passed by the State Text Book Commission requiring that all usable books of the old adoption be used in each county in the State as far as practicable, in order to reduce the cost of the newly adopted books. Had the texts of the old adoption not been used, and all children in the first six grades been furnished with texts of the new adoption, the cost to the State for free books for 1932-1933 would have been \$496,905.70.

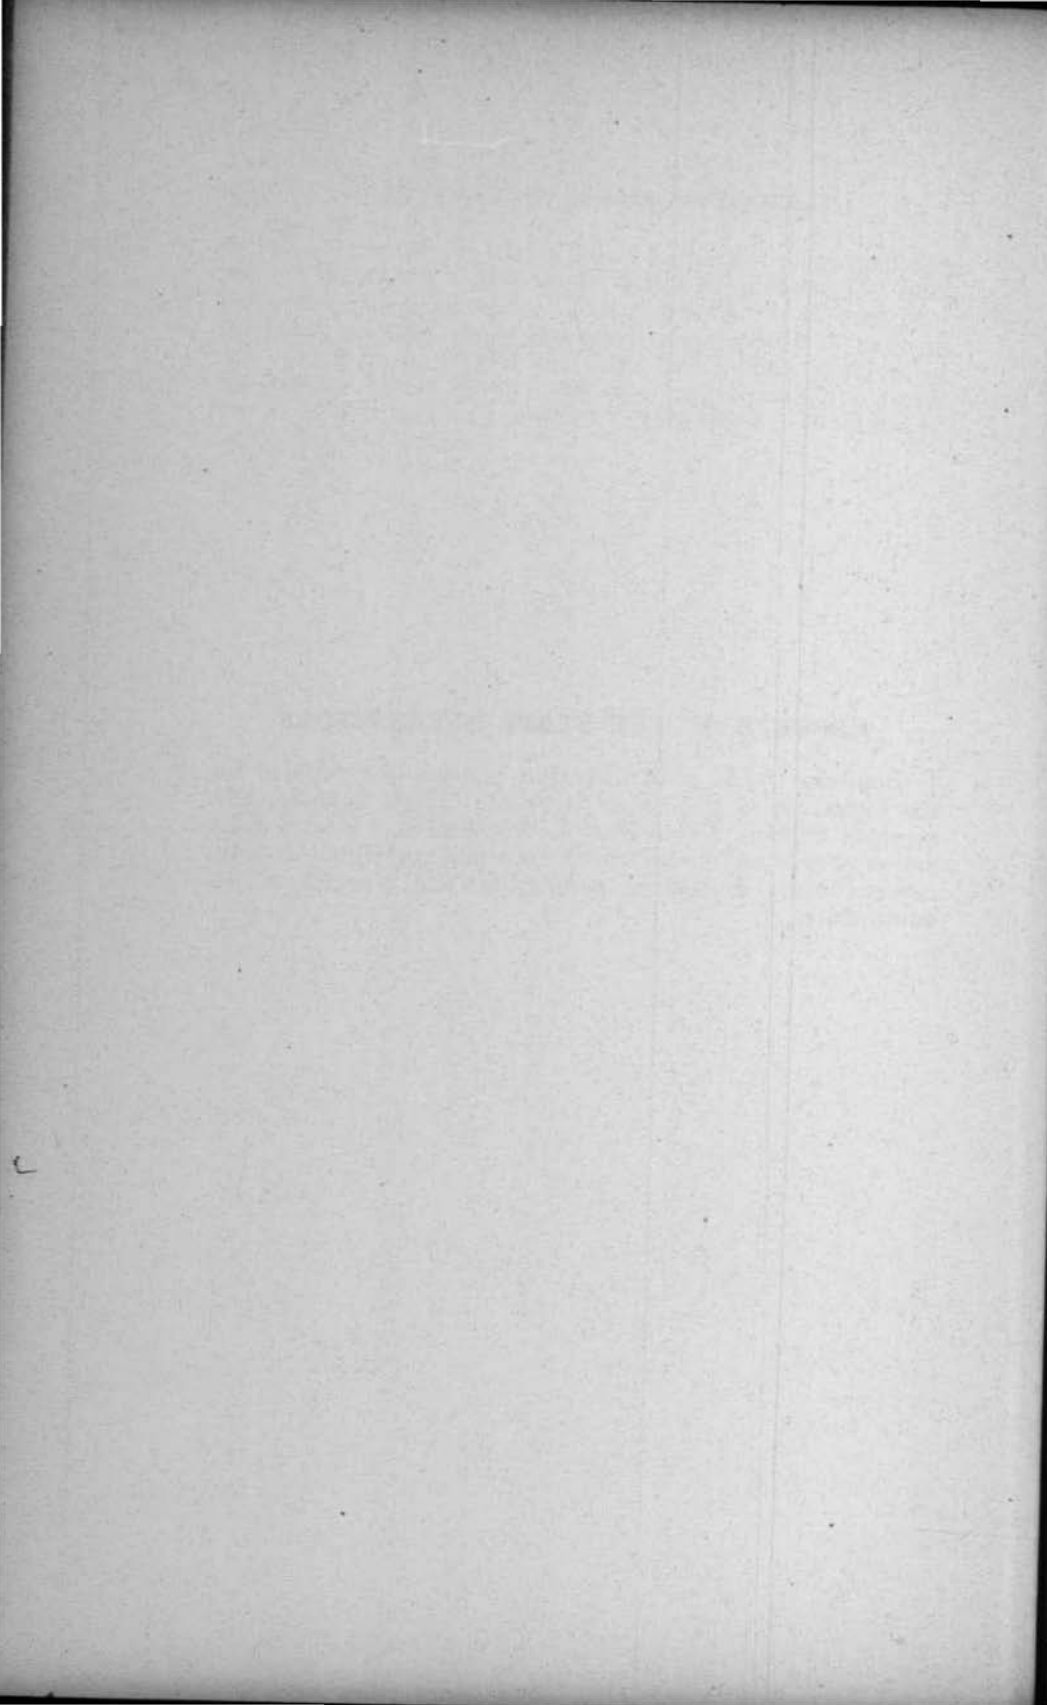

Section 10, Chapter 10254, Acts of 1925 requires that money collected for books lost or destroyed during each school year be remitted to the State Treasurer. It will be seen from the table above that since the Free Text Book Law went into effect \$5,150.74 has been collected. Our records show that only three counties in the State have complied each year with this section of the law while thirty-two counties have not remitted to the State Treasurer any amount collected for books lost or destroyed.

The Free Text Book Law provided that a levy of $\frac{3}{4}$ mills be made on all taxable property for the first year and that

the Governor of the State have authority to reduce the millage whenever a lower levy would be sufficient to purchase the required books. This proved to be a wise provision of the law for in the second year a levy of only $\frac{1}{2}$ mill was required. For the third and fourth years after the passage of the act the levy was reduced to $\frac{1}{8}$ of a mill but in 1930 it was increased to $\frac{1}{2}$ mill and has so remained to the present time.

REPORTS OF THE STATE SUPERVISORS

Chapters II-IX, both inclusive, contain the reports for the biennium of the Supervisors of: High Schools, Elementary Schools, Negro Schools, Physical and Health Education, Trade and Industrial Education, Agricultural Education, Home Economics Education, and Vocational Rehabilitation.

I. SUMMARY OF ACTIVITIES

The State Supervisor of High Schools has done two different types of work during the biennium 1930-32. During the fiscal year 1930-31 he did the usual work of a supervisor of high schools and incidentally gave some time to the State Program of Curriculum Revision. During the fiscal year 1931-32, however, he served as full-time Director of the curriculum program, giving only such time to the high school supervision as was necessary to help the Supervisor of Physical and Health Education with some of the more difficult tasks. The Supervisor of Physical and Health Education had been assigned by the State Board of Education the task of high school supervision in order to relieve the Supervisor of High Schools for the curriculum work.

In carrying out the duties connected with his work, the Supervisor of High Schools spent 289½ days in the office and 259½ days in the field. In addition to this he had a leave of absence from the office of 64 days during the summer of 1931. This time he spent in graduate study. He was also absent from work 15 days on account of sickness. He attended 36 educational meetings and made 37 speeches mostly of a professional nature. He has written two articles for publication; made one revision of the bulletin, *Standards and Programs of Studies for Florida High Schools*; gotten out two *Educational Directories*; prepared the manuscript for *Curriculum Bulletin, Number One*; and gotten out numerous mimeographed letters and small bulletins (mostly on curriculum work).

In connection with the production of the courses of study he has assisted with the organization of numbers of committees, and has called and conducted 63 meetings of such production committees. He has also participated in 50 other committee meetings and conferences connected with his work either as Curriculum Director or Supervisor of High Schools. Due to the fact that only one year of the biennium was devoted to the high school work, only 126 formal inspections of high schools were made.

II. THE CURRICULUM PROGRAM

In April, 1929, the Conference of High School Principals and Elementary Supervisors, convened in Gainesville, passed a joint resolution asking the State Superintendent of Public Instruction to appoint a steering committee to work out plans for building a Florida State Course of Study for grades one through twelve. Such a committee was appointed and held its first meeting in June, 1920. This original committee was composed of W. S. Cawthon, Chairman; F. W. Buchholz, Omer Carmichael, R. L. Carter, G. V. Fuguitt, R. L. Goulding, E. E. McCarty, J. W. Norman, J. H. Parks, James S. Rickards, R. B. Rutherford, N. M. Salley, B. O. Smith, and J. H. Workman. Later Mr. Buchholz resigned and Mr. Carmichael and Mr. Smith left the state. In their stead were appointed Chas. M. Fisher, George Marks, and E. L. Robinson.

This committee decided that the course of study should be made by committees of teachers, rather than by a few so-called experts, and that the largest possible number of teachers be encouraged to participate. An administrative organization was worked out, and the state divided into districts, each district being assigned the task of preparing a course of study in a particular subject field such as mathematics, social studies, English, science, etc. Chairmen were appointed for these committees, but the mistake was made of assigning co-chairmen to some of the more important fields. This slowed up the work, as responsibility for production was not definitely placed.

The school year 1929-30 was devoted very largely to an educational program for the purpose of training teachers to participate in the actual production of courses of study. One hundred and thirty organized groups of teachers studied curriculum principles and practices through a study outline prepared and sent out from the State Department of Public Instruction, and either Mr. R. M. Evans, State Supervisor of Elementary Schools, Miss Mary Sheppard, State Supervisor of Teacher Training, or Mr. M. R. Hinson, State Supervisor of High Schools met one or more times during the year with each of these groups. It is estimated that 1200 to 1500 teachers took part in these study groups.

Many other teachers took correspondence or extension courses in some phase of curriculum work conducted by the University of Florida and the Florida State College for Women. Numbers of other teachers went to summer schools

in the summers of 1929, 1930, and 1931, and took work in curriculum revision.

During the school year 1930-31 actual production work got under way and while some very good work was done, there was a decided lack of coordination of effort, due to the fact that no one could give time to the direction of the program. There was also a very great need for some funds to pay expenses of committee meetings, and a need for the advice of general curriculum specialists and of specialists in the various subject fields to guide the work of the committees of teachers.

It was decided to ask the General Education Board for financial assistance and the Division of Surveys and Field Studies of George Peabody College for Teachers for the consultant services of Dr. H. L. Caswell and Dr. Doak S. Campbell, and to make some effort to secure funds to defray the salary and expenses of a director.

The General Education Board granted, in the spring of 1931, \$7,300 toward defraying the expenses of committee meetings, getting out mimeographed materials for committees, etc., with the condition that the State provide the salary and expenses of a full-time director. The Legislature failed to provide this item. The General Education Board agreed, however, that the conditions of the grant would be met if the State Superintendent would provide from his staff a director.

In order to meet this condition the State Board of Education designated M. R. Hinson, State Supervisor of High Schools, as director of the curriculum work, and C. M. Miles, State Supervisor of Physical and Health Education, to take over the routine work connected with accrediting high schools, to relieve Mr. Hinson so that he could devote practically full time to the curriculum work.

During the school year 1931-32 the Director reorganized, with the approval of the Steering Committee, the administrative set-up for the curriculum program, reduced all committee chairmanships to one head each, and arranged early meetings of all production committees with the Consultants. With the advice of the Consultants the following subject-matter specialists were selected: J. Paul Leonard, William and Mary College; W. A. Brownell, Duke University; Miss Lucile Faust, Alabama State Teachers College; C. L. Brownell, Columbia University; Herbert Arnold, Columbia University; M. L. Shane, Peabody College; Miss Zadie Phipps, Florida State College for Women;

and E. W. Barnhart, Federal Board for Vocational Education, Washington, D. C.

The work of production was pushed to completion during the fiscal year 1931-32. June 1, 1931, the production committee chairmen submitted their complete reports to the Director. Although these committees had done excellent work it was impossible to get from twelve different general committees and many more sub-committees working in different sections of the state materials that would when assembled make a unified course of study.

It was decided to get together a Reviewing and Unifying Committee to re-work these reports into a unified course of study. This committee was composed of: Miss Dempsey Brewster, DeDand; J. E. Brewton, Quincy; Mrs. Margaret Boutelle, Bradenton; Miss Cleve Carson, Jacksonville; D. P. Folsom, Tallahassee; Miss Elinor Moseley, Tampa; Mrs. Clara M. Olson, Gainesville; Miss Elsie Padgett, Orlando; Miss Kathleen Plumb, Clearwater; Mrs. Stelle Mae Powell, Miami; Kenneth Williams, Florida State College for Women; Mrs. Mary S. Williams, Tallahassee; R. L. Goulding, New Smyrna; Mrs. Marcia Rader, Sarasota; H. E. Spaulding, Fort Lauderdale; Miss Fannie Shaw, Extension Division, University of Florida; and Miss Beatrice T. Olson, Jacksonville. The first-named fifteen members of this committee went with the Director to George Peabody College for Teachers to spend the summer of 1932 in the Curriculum Laboratory of that institution where they could have access to the library facilities of the college and the files of courses of studies and other curriculum materials of the Division of Surveys and Field Studies, and where Dr. Campbell and Dr. Caswell, the Consultants, would be available at all times. Miss Shaw and Miss Olson worked at the University of Florida and the Florida State College for Women, respectively. The General Education Board allowed \$1800.00 to be spent in fellowships for these people. The Division of Surveys and Field Studies furnished stenographic service for the group and also paid \$350.00 toward the expenses of the group. The state paid no part of the expense of the members of this group save for the salary and travel expense of the Director which came out of his regular salary and expenses as State Supervisor of High Schools.

This Reviewing and Unifying Committee began its work June 10, 1932, at Peabody College but the task was incomplete July 1, 1932, the date to which this report extends.

2

III. A STUDY OF THE SMALL HIGH SCHOOL IN FLORIDA

This study was made under the guidance of Dr. Frank P. Bachman of the Division of Surveys and Field Studies, George Peabody College for Teachers, and with the financial assistance of the above-named agency.

Although the study is a definite attempt to show statistically the status of certain features of the small Florida high school, a number of the tables, for comparative purposes, give data concerning the large high schools also. Most of the tables include data from all the high schools of Florida of the indicated sizes but in a few of them a representative sample was taken. It will be found that even in those tables where all of the high schools were used that the totals do not agree entirely. For example, the total number of teachers in the small high schools and large high schools do not correspond in Tables I-A, I-B, and II. This seeming inconsistency is due to the fact that all data was not furnished for all teachers in the reports from which the information was taken. Where the data was incomplete or evidently in error the particular teacher or school was eliminated.

The data presented in the tables were taken from the Standardization Reports of the several high schools of Florida which were made to the office of the State Superintendent of Public Instruction during the fall of 1931. The tabulations were made under the direction of M. R. Hinson, State Supervisor of High Schools.

TABLE I-A

TOTAL TEACHING EXPERIENCE OF FLORIDA SENIOR
HIGH SCHOOL TEACHERS IN 1931-32

Years of Experience	*Small High School	§Large High School
1	66	89
2	66	102
3	70	115
4	57	119
5	41	122
6	35	97
7	40	109
8	30	77
9	37	85
10	26	76
11-15	78	261
16-20	41	135
21 and over	40	127
Total	627	1514
Median	5.4	7.5
25 Percentile	2.4	3.6
75 Percentile	10.14	10.53

*Small High School includes:

All 6-Year Junior-Senior High Schools with 11 teachers or less,

All 4-Year Senior High Schools with 7 teachers or less.

§Large High School includes:

All 6-Year Junior-Senior High Schools with 12 teachers or more,

All 4-Year Senior High Schools with 8 teachers or more,

All 3-Year Senior High Schools.

In Table I-A the current year's experience was counted. For example, 66 teachers in the small high schools were teaching their first year, and 89 teachers in the large high schools were teaching for the first time; and 26 small high school teachers and 76 large high school teachers were teaching their tenth year.

The median teacher in the small high school has taught 5.4 years and is teaching her sixth year. To put it another way 50% of the teachers in small high schools have taught less than 5.4 years and 50% have taught more than 5.4 years. Likewise 25% have taught less than 2.4 years and

75% have taught more than 2.4 years, as shown by the 25-percentile. The 75-percentile in like manner shows that 75% of the teachers in the smaller high schools have taught less than 10.14 years and 25% have taught more than 10.14 years.

Similar interpretations can be made from the median and percentiles of the large high school group.

TABLE I-B

TENURE OF FLORIDA SENIOR HIGH SCHOOL TEACHERS
IN 1931-32

Years of Experience	*Small High School	§Large High School
1	228	291
2	127	297
3	97	211
4	59	178
5	44	178
6	30	97
7	17	72
8	11	52
9	7	19
10	2	23
11-15	5	55
16-20	3	22
21 and over	1	6
Total	631	1501
Median	1.7	2.8
25 Percentile	1.0	1.28
75 Percentile	3.53	4.94

*Small High School includes:

- All 6-Year Junior-Senior High Schools with 11 teachers or less,
- All 4-Year Senior High Schools with 7 teachers or less.

§Large High School includes:

- All 6-Year Junior-Senior High Schools with 12 teachers and over,
- All 4-Year Senior High Schools with 8 teachers and over,
- All 3-Year Senior High Schools.

The most significant feature shown by Table I-B is the large teacher turnover in both the large and small high schools, but especially in the latter. The median tenure

is 1.7, and 2.8 years in the small and large high schools respectively. This means that in the small high schools 50% of the teachers have been in their present positions less than two years and 50% of the teachers in the large high schools have been in their present positions less than three years. Attention is called also to the 75-percentiles which indicate that 75% of the teachers in the small Florida high schools have been in their present positions less than four years; and 75% of the teachers in the large Florida high schools have been in their present positions less than five years.

TABLE II

TRAINING BY YEARS OF SENIOR HIGH SCHOOL TEACHERS IN FLORIDA 1931-32

Training	*Small High School		§Large High School	
	No. of Teachers	Per Cent	No. of Teachers	Per Cent
High school and less than 1 year college	35	5.43	19	1.27
1 year college and less than 2	27	4.19	45	3.03
2 years' college and less than 3	39	6.05	107	7.20
3 years college and less than 4	28	4.34	106	7.13
4 years' college and less than 5	374	58.07	771	51.88
5 years' college and less than 6	108	16.77	323	21.73
More than 6 years' college	33	5.12	115	7.73
Total	644		1486	
Median	4.52		4.60	

*Small High School includes:

All 6-Year Junior-Senior High Schools with 11 teachers or less,

All 4-Year Senior High Schools with 7 teachers or less.

§Large High School includes:

All 6-Year Junior-Senior High Schools with 12 teachers and more,

All 4-Year Senior High Schools with 8 teachers and over,

All 3-Year Senior High Schools.

The median training of the Florida senior high school teacher for the small high school is 4.52 years and for the large high school 4.60. This indicates that better than 50% of all senior high school teachers in Florida have done some college work beyond the Bachelor's degree. By simple addition of the per cents of teachers with the several amounts of training it can be seen that 9.62% of the teachers in small senior high schools, and 4.30% of the teachers in the large senior high schools have less than 2 years' college training. It is evident also that 20.01% of the teachers in the small senior high schools, and 18.73% of the teachers in the large senior high schools have less than 4 years' college training. In the small high schools 79.96% of the teachers have 4 years' college training or more, and in the large high schools 81.34% have a similar amount of training. Although the number of teachers having from less than high school training to less than one year's college training is small, it should not be possible for such teachers to secure positions in Florida high schools. Practically all of these teachers are older teachers holding life certificates based upon examination. There are still in Florida two types of certificates based upon examination which permit the holder legally to teach in a Florida high school, the Professional certificate which has no training prerequisite, and the Special certificate which requires a minimum of two years' college before the applicant is eligible for examination. The first type should be discontinued at once and probably the second in the course of a few years.

TABLE III
TEACHING LOAD OF TEACHERS IN FLORIDA SENIOR
HIGH SCHOOLS 1931-32

All 6-Year Junior-Senior High Schools with 11 teachers or less,
 All 4-Year Senior High Schools with 7 teachers or less.

7	0	17
7	1	34
8	0	7
Total		630

Table III needs little interpretation. The median Florida senior high school teacher has 5 teaching and 2 non-teaching periods of work. The non-teaching periods are devoted to such activities as keeping the study hall, or library, club work, etc. It is interesting to note the range. One teacher has 7 non-teaching and no teaching periods while seven have 8 teaching and no non-teaching periods.

TABLE IV
TEACHING COMBINATIONS BY FIELDS OF STUDY IN FLORIDA SENIOR HIGH SCHOOLS IN 1931-32

Subjects	Art	Agriculture	Commerce	English	French	German	Home Economics	Latin	Manual Arts	Mathematics	Music	Psychology	Physical and Health Education	Science	Social Studies	Spanish	Total

Total	21	56	125	477	32		111	112	44	328	45	8	124	278	389	74	2224

Table IV upon first glance seems a very complicated one, but a little study will suffice to make clear its meaning. Its meaning is clearer if read from left to right. For example, eleven art teachers are teaching art only, two art teachers are teaching some English, one some music, three some social studies, and one some Spanish. There were eighteen teachers devoting all or a major part of their time to the teaching of art. There are other teachers besides these who are teaching some art. These may be discovered by reading down the column under *Art*. There it will be noted that five English teachers are teaching some art, one manual arts teacher is teaching some art; likewise two mathematics teachers, one physical and health education teacher, and one social studies teacher is teaching some art. Any other subject may be taken up in like manner.

It will be noted that, omitting a few of the subjects not frequently taught, almost every conceivable combination of fields is taught. On the other hand, the highest frequency of combination is almost always with the same subject. For example, English is combined with English 261 times, while its highest frequency with any other subject field is 70 for social studies. It is, however, combined with some other subject 421 times. This can be found by taking the total of all figures in the horizontal column after *English* and those in the vertical column under *English* omitting the 261 combinations of English with English. Any other subject may be examined in like manner.

While almost every type of combination may be found it is possible to trace certain tendencies. While English, for example, is taught in combination with every other field save German (which is taught in only one school), it tends to combine more frequently with social studies and the languages.

Teachers of commerce, art, and music do not teach other subjects with any large frequency. This is especially true of music and commerce. Mathematics is combined with every other subject, but more frequently with science and social studies. Social studies combines with itself more than twice as frequently as with any other one subject but less than half as frequently as with all other subjects. It seems to combine with English and mathematics more than any other subjects.

TABLE V

SEMESTER HOURS' COLLEGE TRAINING IN SUBJECTS TAUGHT IN SENIOR HIGH SCHOOLS IN FLORIDA IN 1931-32

Semester Hours	Agriculture	Biology	Chemistry	Civics	Commercial Subjects	English	Economics	French	General Science	History	Home Economics	Latin	Mathematics	Music	Manual Training	Physical and Health Education	Physics	Psychology	Sociology	Spanish	Total

Median	37	6.6	15.8	0	7.5	21.4	4.1	22.5	22.0	14.0	33.8	19.5	15.2	22.5	34.5	7.5	10.5	9.5	4.1	16.3	16.74

NOTE:

- Credits in Political Science have been placed under the head of Civics.
- Under General Science the total number of hours in physics, chemistry, biology, botany, and zoology, have been placed.
- The following sampling of teachers has been employed:
One teacher out of each school with ten teachers or less;
One teacher out of ten in the schools with more than ten teachers.

Although only a sampling of the teachers in the senior high schools are included in Table V, it is felt that a truly representative sampling has been taken. College transcripts were used to determine the amount of training in the various fields. In general science all college science courses were counted.

The median number of semester hours training for teachers of all types is 16.74. Although this is a very good showing, attention is called to the fact that the teachers of biology, civics, commercial subjects, economics, and psychology have very little training. The medians range from near zero in civics to 34.5 in manual training. Some of these subject medians are figured on so few cases that they are not very accurate, but in general they do indicate about the amount of training that such teachers in Florida have.

TABLE VI

DISTRIBUTION OF FLORIDA SENIOR HIGH SCHOOLS BY ENROLLMENT AND NUMBER OF TEACHERS 1931-32
(Principals included.)

Enrollment	Number of Teachers								Total	Per Cent
	3	4	5	6	7	8	9	10 or more		
50 and Under		4	4						8	4.42
51-100	4	6	19	9	1	1			40	22.09
101-200		2	6	13	16	11	5	9	62	34.25
201-500				1	2	2	4	41	50	27.62
501-1000								13	13	7.18
1001 and Over								8	8	4.42
Total	4	12	29	23	19	14	9	71	181	
Per Cent	2.21	6.63	16.02	12.71	10.50	7.73	4.97	39.23		

It is evident from an examination of Table VI that Florida has few very small and few very large high schools. The median number of pupils is 168.5. Attention is called to the fact, however, that a majority of these schools are 6-year high schools containing grades 7 and 8. If only grades 9-12 are considered, the median enrollment is about 100. The median number of teachers is 8.

Total Number of Subjects Offered by the High Schools of Each Size	23	42	54	51	47	94	97

Table VII shows the number of Florida senior high schools of different sizes that offer various subjects, the total number of schools offering a given subject (found in the "Totals" column at the right of the table), and the total number of subjects offered by schools of various sizes.

It will be noted that Latin or algebra, for example is not counted just once, but that each subject is counted as many times as years of it are offered.

Some seeming inconsistencies are apparent in the totals but these are due entirely, it is believed, to the facts that in some schools certain subjects are alternated, and that in some reports the data had to be omitted for certain schools due to evident inaccuracies. The figures given in the table are substantially correct.

TABLE VIII-A

UNITS OF WORK OFFERED IN SMALL HIGH SCHOOLS OF DIFFERENT SIZES

(Four-year Senior High Schools with 6 teachers and less)

No. Units Offered	3-Teacher	4-Teacher	5-Teacher	6-Teacher	Total
15 or less.....	5	6	3	0	14
16-18	1	4	4	2	11
19-22	..	..	4	3	7
Total	6	10	11	5	32

Tables VIII-A and VIII-B show the number of high school units offered in small 4-year, and 6-year senior high schools of Florida respectively for the school year 1931-32. The tables need no explanation for reading them. Those schools offering less than 16 units during 1931-32 are possibly those which alternate such subjects as chemistry and physics, general science and biology, American and English literature, etc. There is a possibility of error also in Table VIII-B in those schools offering "25 units and over." These are 6-year high schools and in checking, although an effort was made to omit all seventh and eighth grade subjects, some of these may erroneously have been included.

TABLE VIII-B

UNITS OF WORK OFFERED IN SMALL HIGH SCHOOLS OF
DIFFERENT SIZES

(Six-year Junior-Senior High Schools with 8 teachers and less)

No. Units Offered	4- Teacher	5- Teacher	6- Teacher	7- Teacher	8- Teacher	Total
15 or less:	..	1	..	..	..	1
16-18	1	4	..	..	..	5

In Tables IX-A and IX-B given below an attempt is made to show what becomes of Florida high School graduates, that come from the smaller high schools. Out of a total of 1160 graduates of these high schools in June 1931, 274 or 24.5% went to college and 846 or 75.5% did not. This would seem to indicate that the function of the small high school in Florida is not college preparatory.

TABLE IX-A

GRADUATES ENROLLED IN HIGHER INSTITUTIONS OF
LEARNING BY SEXES 1930-31

All 6-year Junior-Senior High Schools with 11 Teachers or less.
All 4-year Senior High Schools with 7 Teachers or less.

Name of Higher Institution	Per Cent of Both	Both	Boys	Girls
University of Florida..	24.45	67	67

Unknown	12.76	108	32	76
Deceased	.11	1	1	
Total		846	342	504

Tables X-A and X-B show the comparative holding power of the large and small high schools in terms of enrollments by grades, and the per cent that the enrollment in a given grade is of the total enrollment. All the high schools were not included in this table due to the large amount of labor necessary in compiling the tables and also to the fact that about half the schools was considered sufficient to show the relative enrollments in the various grades and to furnish comparisons between the small and large schools. Every second school was taken in making this tabulation.

TABLE X-A

*HOLDING POWER OF SMALL PUBLIC HIGH SCHOOLS IN
1931-32

Six-year Junior-Senior High Schools with 11 Teachers or less.

Four-year Senior High Schools with 7 Teachers or less.

Grades	Per Cent of Total Enroll- ment	Both	Boys	Girls
9th Grade	33.70	2836	1336	1500
10th Grade	26.43	2224	1034	1190
11th Grade	21.54	1813	760	1053
12th Grade	18.30	1540	658	882
Total Enrollment		8413	3788	4625

*Due to the great amount of work necessary to compile these figures every other school was included. The totals are, therefore, meaningless save for use within the table.

TABLE X-B

*HOLDING POWER OF LARGE PUBLIC HIGH SCHOOLS IN
1931-32

Six-year Junior-Senior High Schools with 12 Teachers and over.
Four-year Senior High Schools with 8 teachers and over.

Grades	Per Cent of Total Enroll- ment	Both	Boys	Girls
9th Grade	32.23	5938	2997	2941
10th Grade	26.44	4870	2299	2571
11th Grade	22.93	4225	1966	2259
12th Grade	18.40	3389	1449	1940
Total Enrollment		18442	8711	9711

*Due to the great amount of work necessary to compile these figures only every other school was included. The totals are, therefore, meaningless save for use within the table.

One of the most interesting features of these tables is the close agreement between them. The percentage of the total enrollment enrolled in each grade is almost identical in the two sizes of schools. It would appear from these figures that the holding power of the small high school is essentially as great as that of the large high schools. There is less than three per cent difference between losses from grade nine to twelve in the large and small high schools. The small high school loses 45.7 per cent of the ninth grade by the time they enter the twelfth grade and the large high school 42.9 per cent. This is a difference of 2.8 per cent in favor of the holding power of the large high school. In both types of schools the girls remain in school better than the boys. In both the large and small high schools about 50 per cent of the boys drop out between grades nine and twelve. To be exact, the large high school loses 51.7 per cent and the small high school 50.7 per cent. On the other hand, the small high school loses a larger percentage of girls than the large high school.

It is probably reasonable to expect that the larger high school with its richer curricular and extra-curricular program would hold pupils far better than the small high school. Such is not the case. There are probably other compensating factors. Although the small high school has fewer extra-curricular activities, such as athletic teams, clubs, etc., it is altogether probable that a larger percentage of the pupils have an opportunity to participate. Then too the enrollment being small the boy and girl feel that teachers have more interest in them.

GENERAL STATISTICS FOR 1930-1931.

CHAPTER III

ELEMENTARY SCHOOLS

SUMMARY OF ACTIVITIES

During the biennium which closed June 30, 1932 the State Supervisor of Elementary Schools was in the field for not more than about 190 days, but during that time he spent some time in as many as sixty-four of the sixty-seven counties of the State. He met with ten County Boards and held conferences with nearly all of the County Superintendents. He attended seventeen county, district, or State educational meetings, and made sixteen more or less formal addresses to groups of school men and women. During this biennium the Elementary Supervisor made only two trips to meetings outside of the State—two meetings of Directors of Research for the Southern States which met at Nashville, Tennessee, in December, 1930, and in April, 1932.

The activities carried on in the office during the biennium may be classified as follows:

1. Routine office work consisting of correspondence, answering questionnaires, holding conferences with visitors and others, checking reports, arranging blanks for reports, etc.

2. Work on statistical data for the use of members of the Legislature and school officials, and compilation of Florida data for the National Survey of School Finance.

3. Work having to do with the Instruction Unit basis of distribution of State School Funds before and after the passage of the Instruction Unit law by the Legislature of 1931.

4. Examination of new books for possible addition to the Library List for Elementary Schools.

THE INSTRUCTION UNIT LAW

The growing demand that the State contribute largely to the support of education, and the increasing sums being made available to the State for the support of the public schools have made it necessary that much attention be

given to plans for equitable distribution of State funds. Various methods of distribution have been used in this State during recent years, but just recently the average daily attendance basis is the one provided by law.

Average daily attendance is a better standard for distribution than many bases that have been proposed, but it lacks some elements of refinement necessary in any allotment of funds according to need. The following weaknesses are inherent in the average daily attendance basis of distribution:

1. It does not take into account the differences in cost of high school and elementary school instruction.
2. It does not take into consideration the cost of the small isolated school.
3. It does not take into account the cost of transportation of pupils.
4. It does not put a premium on long term schools.
5. It makes no effort to provide actual equalization of opportunity for all pupils.

Inasmuch as the Legislature was to meet in April, 1931, the Supervisor of Elementary Schools was given the task of familiarizing himself with the Instruction Unit or Teacher unit basis of distribution of funds to the end that some workable plan might be embodied in a bill to be placed before the law-making body. He immediately set to work by taking the Instruction Unit plan suggested by Dr. Paul Mort of the Survey Staff of the Florida Educational Survey, and with the advice and assistance of the State High School Supervisor and others attempted to adapt Dr. Mort's plan to the present needs of Florida schools. The plan thus worked out in the State Department of Public Instruction was carried to County Boards of Public Instruction, to groups of interested persons, and was published by the press of the State. Tabulations were made showing the amounts of State funds each and every county would receive upon the average daily attendance basis and upon the instruction unit basis, and these figures were made more impressive by means of graphical representations.

The Committee of Sixteen of the Florida Education Association became interested in the Teacher Unit basis of distribution of State funds, and that body in joint session with the Board of Directors of the Florida Education Association at Gainesville on February 16, 1931, voted unanimous approval of the plan. Some changes were later

made in the language of the plan, and the Instruction Unit bill was drawn and presented to the Legislature.

After the bill had been introduced into the Legislature the State Department of Public Instruction prepared much tabular material for the members of the House and Senate, and members of the supervisory staff were asked to appear before committees having the Instruction Unit and other educational bills under consideration.

The Instruction Unit bill passed both houses of the Legislature early in the regular session, and was signed by the Governor on May 20, 1931.

Immediately following the passage of the law data sheets were prepared for the reports of County Superintendents in compliance with the provisions of the law. Upon receipt of these reports from the County Superintendents it has been the duty of the State Department of Public Instruction to calculate the number of instruction units to which each county is entitled, and to estimate the amount to be paid by the State to the various counties. In this work the Supervisor of Elementary Schools has rendered as much assistance as possible while in the office.

NO STATE-WIDE TESTING PROGRAMS

During the entire biennium the attention of supervisors, principals, and teachers has been focused upon curriculum reconstruction, and for that reason no attempt has been made to sponsor or encourage State-wide programs such as have been carried on in other years for the improvement of instruction in the common school subjects. The Supervisor has rendered all possible assistance in the curriculum program, but has found time to give a few standard tests in spelling, writing, reading, and arithmetic. In response to a request from the Superintendent of the Boys' Industrial School at Marianna three days were spent in that institution, October 13-15, 1931, giving intelligence and achievement tests, and assisting in evaluating the results of testing.

COUNTY-WIDE VISITS TO SCHOOLS

It is of course impossible for one person to visit the 2300 elementary schools of the State during any one year, but if it were possible, the mere visiting of schools without some definite objective in view could not serve any very

important purpose. However, the Supervisor every year visits with the County Superintendents of several counties practically all of the schools of their respective counties and after returning to the office writes reports to the County Superintendents, with copies to chairmen of County School Boards, upon the general conditions of the schools visited, making definite recommendations for their improvement. Summaries of the points of merit and recommendations for improvement of the schools visited in a certain county as pointed out by the Supervisor in his report to the County Superintendent are herewith given:

Points of Merit

1. No school had a term of less than eight months—one school had nine months.

2. The median annual salary paid was \$800, while no teacher received less than \$500.

3. 65% of the teachers had one or more years of college training to their credit.

4. 70% of the teachers were holders of certificates not lower than First Grade, and 25% were holders of Graduate State certificates.

5. Certain schools were commended for doing unusually good work, and attention was called to the fine spirit of cooperation between principals, teachers, and pupils observed in those schools.

6. Beautification programs being carried out in certain schools were commended, and one school was mentioned by way of illustration.

7. One rural consolidated school was pointed out as one of the best of its kind in the State, and the school authorities were congratulated upon securing a good building at very low cost.

8. Attention was called to marked improvement made in the general appearance of one school since a former visit of the Supervisor.

9. The use of results of testing and measuring in certain schools to enable pupils to make progress in their work was commended.

Recommendations

1. Consolidation of five one-teacher schools with larger schools was recommended. It was pointed out that the physical conditions surrounding three of these schools were

decidedly bad. The suggestion was made that the children attending these five schools could be absorbed in larger schools without employing additional teachers.

2. It was recommended that two other one-teacher schools be allowed to continue where they were for the reason that the distances to larger schools were too great to make transportation advisable.

3. Specific reference was made to unsanitary conditions and obscene writing observed in the toilets of certain schools.

4. Poor janitorial work, improper classroom lighting, and an improperly adjusted drinking fountain were mentioned in connection with certain schools.

5. Attention was directed to the fact that few evidences were observed that penmanship was being taught in the schools visited.

STANDARDIZATION OF SCHOOLS

The visitation of schools has in many cases of necessity been largely inspectorial, and with a view to possible standardization of the schools visited, though the matter of quality of instruction has been given as much attention as the limited time spent in each school would permit. The number of elementary schools recommended to the State Board of Education for standardization has gradually increased since 1926 as follows:

1926-27	58 schools
1927-28	181 schools
1928-29	264 schools
1929-30	281 schools
1930-31	365 schools
1931-32	512 schools

The value of the standardization of schools has been perhaps greatly over estimated by the various school communities throughout the State, but it has had the following beneficial effects:

1. It has emphasized the need for properly certificated teachers.

2. It has stressed the matter of properly built and equipped classrooms.

3. It has greatly improved the sanitary conditions in and around school houses.

4. It has worked for improved health for school children.

5. It has called attention to the benefits to be derived from organized play.

6. It has striven to make the schools centres of community activity.

7. It has stressed beautification of school grounds.

8. It has emphasized the importance of patriotism by requiring the flying of the flag of the United States.

9. It has stimulated the use of pleasure-reading library books for the adolescent children of the elementary grades.

10. It has stressed the importance of cleanliness, good housekeeping in classrooms, the proper adjustment of window shades, and the proper heating and ventilation of classrooms.

11. It has striven to cultivate in children a love for the beautiful in music and art by requiring musical instruments in the schools, and appropriate framed pictures in the classrooms.

12. By means of flexible points it has encouraged the addition of any possible features not specifically required, but that enhance the attractiveness and general utility of the schools.

13. The requirement that a Parent-Teacher or similar organization be working with standard schools is bringing about a fine spirit of cooperation between teachers and parents.

STANDARD ELEMENTARY SCHOOLS

For the Year 1930-31

Group I—A school of ten or more teachers.

Group III—A school of three to five teachers.

Group II—A school of six to nine teachers.

Group IV—A school of one or two teachers.

A Limited Standard School meets all Required points and at least 25% of the Flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all Required points and 25% of the Flexible points.

A Superior Standard School meets all Required points and 75% of the Flexible points.

An Exceptional Standard School meets all Required points, 75% of the Flexible points, has no teachers with less training than two years beyond a standard high school, the building scores at least 900 on the Strayer-Englehardt Score Card, has ample playground space, well-kept lawns, trees, flower beds, etc., and the spirit of the school is such as to attract the favorable attention of the casual observer.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1928.)

ACCREDITED ELEMENTARY SCHOOLS

For the Year 1931-32

Group I—A school of ten or more teachers

Group II—A school of six to nine teachers

Group III—A school of three to six teachers

Group IV—A school of one or two teachers

A Limited Standard School meets all required points and at least 25% of the flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all required points and 25% of the flexible points.

A Superior Standard School meets all required points and 75% of the flexible points.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1931.)

SOME TABLES OF COMPARISON

Tables I-VI give some comparative data for Elementary Schools, Junior High Schools, and Senior High Schools (white and negro) for three consecutive school years beginning with 1929-30. These tables are self-explanatory but a few observations are made with reference to each of them.

TABLE I

PUPILS CLASSIFIED ACCORDING TO ENROLLMENT

	1929-30	1930-31	1931-32
Elementary:			
White	188,478	186,279	189,761
Negro	87,368	88,927	94,121
Both	275,846	275,206	283,882
Junior High School:			
White	34,277	39,422	41,108
Negro	2,680	3,322	4,356
Both	36,957	42,744	45,464
Senior High School:			
White	31,820	33,324	35,332
Negro	1,811	2,838	3,080
Both	33,631	36,162	38,412
Grand Total.....	346,434	354,112	367,758

Table I shows that during the three school years, 1929-30 to 1931-32,

(1) There has been a normal increase in the enrollment of the three divisions of the schools.

(2) The increase in enrollments in the Junior and Senior High School divisions has been greater than that in the Elementary schools.

(3) For the School year 1931-32 the percentage of enrollment for the divisions are: Elementary 77%; Junior High School 12%; Senior High School 11%. (Percentages not shown in the table.)

TABLE II
PUPILS CLASSIFIED ACCORDING TO AVERAGE DAILY
ATTENDANCE

	1929-30	1930-31	1931-32
Elementary:			
White	141,661	143,034	147,827
Negro	67,470	69,193	75,131
Both	209,131	212,227	222,958
Junior High School:			
White	27,237	31,669	33,559
Negro	2,182	3,228	3,634
Both	29,419	34,897	37,193
Senior High School:			
White	26,941	28,299	29,991
Negro	1,551	2,364	2,586
Both	28,492	30,663	32,577
Grand Total	267,042	277,787	292,728

Table II shows for average daily attendance increases similar to those shown for enrollment in Table I.

TABLE III
TEACHERS CLASSIFIED

	*1929-30	*1930-31	1931-32
Elementary:			
White	5,818	5,629	5,540
Negro	2,080	2,101	2,291
Both	7,898	7,730	7,831
Junior High School:			
White	1,248	1,312	1,372
Negro	102	110	168
Both	1,350	1,422	1,540
Senior High School:			
White	1,588	1,786	1,579
Negro	124	173	122
Both	1,712	1,959	1,701
Grand Total	10,960	11,111	11,072

*In some cases supervisors and principals were probably counted as teachers.

Table III shows that

(1) The numbers of Elementary and Junior High School teachers employed (white and negro) have increased gradually from 1929-30 to 1931-32.

(2) There was a slight decrease in the number of Senior High School teachers employed between 1930-31 and 1931-32.

(3) The number of negro Senior High School teachers decreased from 173 in 1930-31 to 122 in 1931-32, though there was a marked increase in the number of Junior High School teachers.

TABLE IV

AVERAGE NUMBER PUPILS ENROLLED PER TEACHER

Elementary :	1929-30	1930-31	1931-32
White	32.4	33.1	34.3
Negro	42.0	42.3	41.1
Both	34.9	35.6	36.3
Junior High School :			
White	27.5	30.0	30.0
Negro	26.3	30.2	25.9
Both	27.4	30.0	29.5
Senior High School :			
White	20.0	18.7	22.4
Negro	14.6	16.4	25.2
Both	19.6	18.5	22.6

Table IV shows the number of pupils enrolled per teacher in the three divisions for three successive years. It will be noted that

(1) In the Elementary white schools the number of pupils per teacher has increased from 32.4 in 1929-30 to 34.3 in 1931-32.

(2) The number of negro Elementary pupils per teacher has decreased from 42.0 in 1929-30 to 41.1 in 1931-32.

(3) In the Junior High School the number of white pupils per teacher has increased from 27.5 in 1929-30 to 30.0 in 1931-32. During this same period the number of negro pupils per teacher decreased from 26.3 to 25.9.

(4) In the Senior High School the number of white pupils per teacher has increased in three years from 20.0 to 22.4 and the number of negro pupils has increased from 14.6 to 25.2 per teacher.

TABLE V

TOTAL SALARIES OF TEACHERS

Elementary :	1929-30	1930-31	1931-32
White	\$4,454,028	\$4,396,254	\$4,485,095
Negro	742,196	768,957	934,735
Both	\$5,196,224	\$5,165,211	\$5,419,830
Junior High School :			
White	\$1,319,163	\$1,439,362	\$1,401,727
Negro	63,849	76,313	95,467
Both	\$1,383,012	\$1,515,675	\$1,497,194
Senior High School :			
White	\$2,051,013	\$2,075,172	\$2,012,050
Negro	87,592	115,082	110,465
Both	\$2,138,605	\$2,190,254	\$2,122,515
Grand Total	\$8,717,841	\$8,871,140	\$9,039,539

TABLE VI

AVERAGE ANNUAL SALARIES OF TEACHERS

Elementary :	1929-30	1930-31	1931-32
White	\$ 765.56	\$ 781.00	\$ 809.58
Negro	356.83	366.00	418.00
Both	657.92	668.20	692.10
Junior High School :			
White	\$1,057.02	\$1,097.07	\$1,021.67
Negro	625.97	693.75	568.26
Both	1,024.45	1,065.88	972.20
Senior High School :			
White	\$1,291.57	\$1,161.91	\$1,274.25
Negro	706.39	665.21	905.45
Both	1,249.19	1,118.05	1,247.80
Total Average Salary For All Teachers.....	795.42	798.41	816.43

Table V gives the total amounts expended for salaries of teachers, year by year, for 1929-30, 1930-31, and 1931-32, and Table VI gives the average salaries by divisions and races for those years. It will be noted in Table V that the salaries of teachers have made a slight increase in the

three-year period, though the actual cost per pupil enrolled, for current expenses, has decreased from \$38.74 to \$34.31. (See table on Data for Florida Schools Since 1869-70, First Chapter of this Biennial Report.)

Table VI shows slight increases in salaries of teachers during the three-year period, but these are still low as compared with the salaries paid in the country as a whole. In Continental United States the average salary for teachers, principals and supervisors for 1930-31 was \$1,440.00 (See Circular No. 11, 1932, Research Division, Department of Superintendence, National Education Association, 1201 16th Street, N. W., Washington, D. C.), whereas, the average salary for Florida teachers, principals, and supervisors for that year was \$889.39, and the average salary for teachers alone was \$798.41 as shown in Table VI.

URGENT SCHOOL NEEDS

Two years ago the Supervisor of Elementary Schools noted under the above head ten items which in his opinion were necessary improvements if the schools of the State are to meet the needs of the boys and girls of Florida.

At the present time schools everywhere are feeling keenly the effects of the financial depression, but school people are carrying on with a grim determination to render maximum service in spite of conditions disheartening in the extreme.

The needs mentioned two years ago are, most of them, still unrealized and these with others that have arisen since that time are now called to the attention of those interested in school progress.

(1) School people must convince the public of their desire to contribute to actual educational needs of boys and girls.

(2) Necessary economies must be practiced to the end that a "pay as you go" policy may be adopted and followed by every county and every school.

(3) A proper balance between local and state responsibility for financing schools must be reached and put into practice.

(4) Funds for school purposes must be certain in amount, and available regularly during the school year.

(5) Every boy and every girl must have opportunity for a good education no matter where he or she may reside.

(6) None but properly trained teachers must be employed.

(7) Teachers must be assured a living wage, the same to be based upon amount of training, successful experience, and to some extent upon local cost of living.

(8) The new curriculum must be gotten into the hands of every teacher, and every teacher taught to use it efficiently.

(9) Economical and necessary consolidation of schools must be continued.

(10) Business-like bookkeeping and reporting of school finances must be guaranteed in every county.

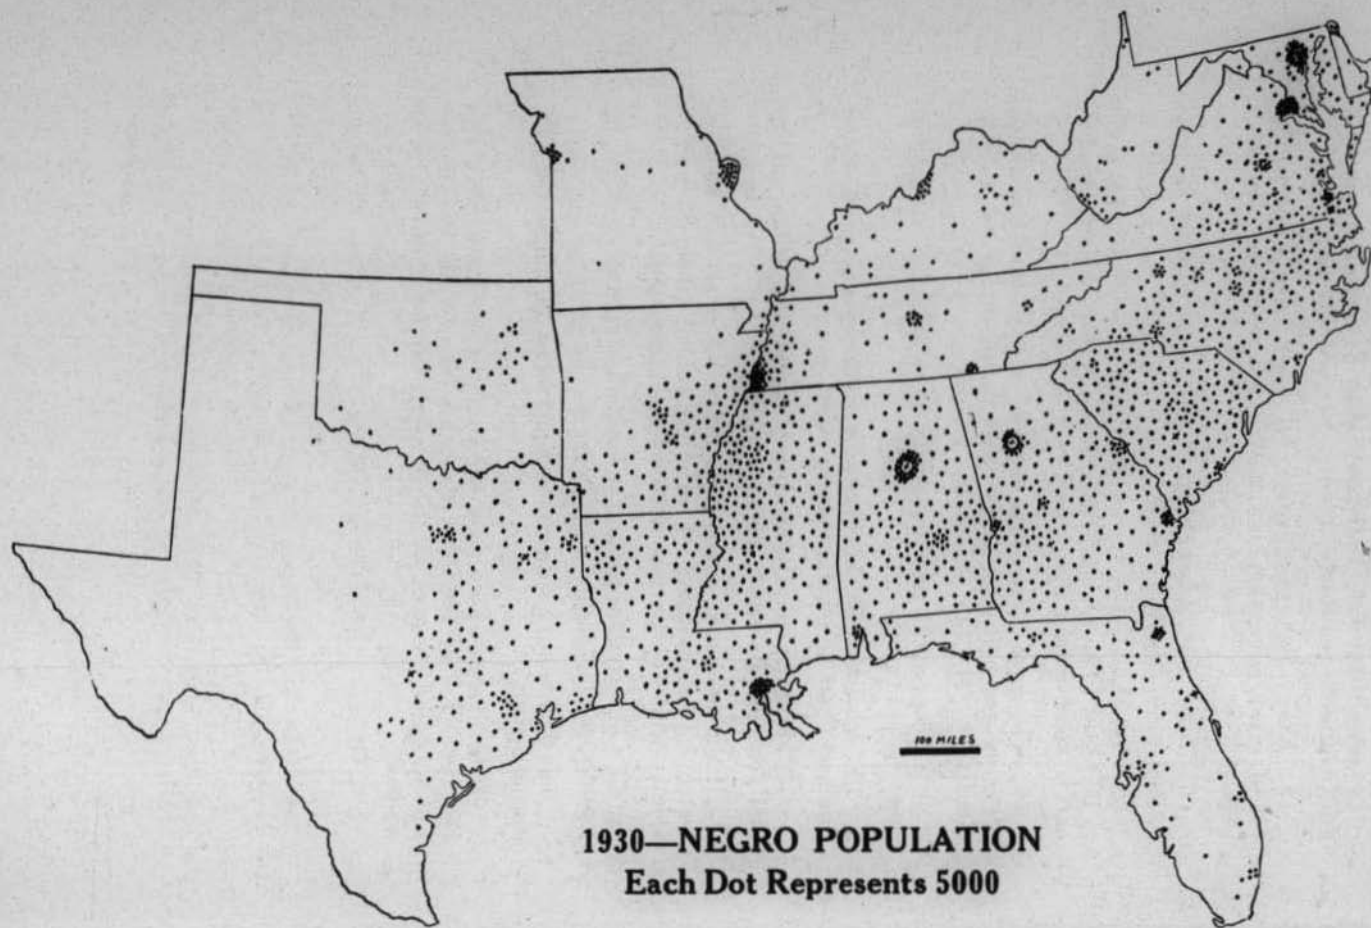

(11) Definite pupil-accounting record should be set up and followed in every school.

(12) School and community libraries must not be neglected. Consolidation of existing school libraries and a county-wide circulation of books are suggested.

(13) The county unit of school administration must be maintained.

(14) The county superintendency must be magnified and strengthened.

(15) A new school code set up in accordance with the best practice in modern education should be considered for adoption as soon as the present financial unrest is at an end.

1930—NEGRO POPULATION
Each Dot Represents 5000

CHAPTER IV

NEGRO SCHOOLS

POPULATION

The map on the opposite page shows the distribution of the 1930 Negro population in the southern states. Each dot represents five thousand Negroes. Florida's Negro population is small as compared with that of most of the southern states. The Negro population of Florida is four hundred thirty-one thousand eight hundred twenty-eight which is 29.4% of the total population of the state. In the decade from 1920 to 1930 Florida's Negro population increased one hundred two thousand three hundred and forty-one but the per cent of the total state population decreased from 34 to 29.4%.

Thirty-one per cent of all rural residents are Negroes, whereas 51% of all Negroes residing in Florida live in the country. Twenty-nine per cent of all urban residents are Negroes whereas 49% of all Negroes reside in cities. Negroes live in every county in the state though they are not evenly distributed over the state. Three and one-half per cent of the total population of Holmes County are Negroes, whereas 70% of the residents of Jefferson County are Negroes.

ILLITERATES

Eighty-three thousand two hundred and forty-two of the residents of Florida are classified as illiterates. Sixty-five thousand one hundred and sixty-seven of them are Negroes. This number is 18.8% of all Negroes ten years old or older. Of every one thousand Negroes of this age in Florida one hundred and eighty-eight can not read and write. Although the Negro population of Florida is nearly equally divided between rural and urban residents the distribution of illiterates does not follow this division of residence. Three per cent of all urban Negroes between the ages of ten and twenty years old are illiterates, whereas 15.2% of all rural Negroes of the same ages are illiterates. Fifteen and two-tenths per cent of all urban Negroes twenty-one years old and older are illiterates, whereas 29.6% of all rural Negroes of corresponding ages are illiterate. The cause of this illiteracy is shown in part in Table I.

TABLE I

PER CENT OF SIX TO TWENTY YEAR OLD NEGRO CHILDREN ATTENDING SCHOOL IN 1920 AND 1930

Ages in Years	1920		1930	
	Rural Per Cent	Urban Per Cent	Rural Per Cent	Urban Per Cent
6	38.5	65.1	41.5	70.8
7-13	65.6	91.3	76.	94.2
14-15	61.1	80.9	64.5	78.9
16-17	32.6	42.1	34.	44.
18-20	7.1	9.1	8.6	11.3

SCHOOL ENROLLMENT

Graph I below shows the enrollment and classification of Negro children in the public schools of Florida 1930-31.

The public Negro schools operate a thirteen-year system. This is due to keeping children one whole year in the chart class. The chart class is that group of children attending school for the first time. The chart class is also called the beginners or primers. Normally in white schools the first half of the eight month term is used to finish the beginning work and the second half of the term is used to complete the remainder of the first grade. The group of children is classified as the First Grade. As long as Negro schools operated a term of four months teachers were justified in keeping children in the chart class one term and in the first grade one term, promoting them to the second grade at the end of eight months or two four-month terms. Now that Negro schools are operating eight months there should be no classification as chart class and children ought to be classified and reported as First Grade. Regardless of the present term of eight months Negro teachers, due to lack of training and tradition, are continuing to keep children in the beginning work one whole term and the first grade one whole term.

Thirty-nine per cent of the children are enrolled in the chart class and first grade. Teachers' time and efforts should be distributed according to the enrollment of children. From the enrollment in the chart class and first grade it is obvious what this group of children is costing in time and money.

Ninety per cent of the total enrollment are in the chart class and first six grades. Ten per cent are in the upper six grades. In the selection and training of teachers the ten per cent of children in the upper grades have received more consideration than the ninety per cent in the lower six grades. High school teachers are required to possess college training and certification in the subjects they teach. The only requirement made of teachers who teach the ninety per cent of the children in the lower grades is that they possess a valid certificate which is usually a low grade certificate earned on examination.

In 1930-31 seventeen and six-tenths per cent of all the teachers held no valid certificate. Seventy per cent of the teachers held second and third grade certificates. Practically all of these teachers taught in the first six grades. As long as untrained or poorly trained teachers are employed to teach the primary grades the present large and expensive retardation in those grades may be expected.

Very few counties have a salary schedule based upon success in teaching, years of experience and training. High school teachers are usually paid higher salaries than elementary teachers. This discrimination in pay is based upon an untenable basis with the difference reversed. The best paid teachers should be the most successful teachers who should be employed to teach the ninety per cent of children in the lower grades. By making the salaries of teachers in the lower grades larger the more successful teachers should be attracted to those grades which should help to decrease the present large and expensive retardation in the primary grades.

In the schools employing more than one teacher there is seldom fair distribution of work among teachers. In three teacher schools and larger teachers in primary grades attempt to teach from forty to one hundred and ten beginning children, while departmental work is attempted in the higher grades for ten per cent of the children. The administration of the individual school is left entirely to a principal whose training has been for the higher grades and whose teaching is done in the higher grades. This principal organizes the school and assigns teachers to grades as if the enrollment and classification of children were normal. Usually the most poorly trained teachers are assigned the lowest grades with the largest enrollment and the better trained teachers are assigned higher grades or departmental work in higher grades with small enrollment. As long as this condition continues the present large and expensive retardation in the primary grades may be expected. It might be well to reverse the administration and appoint the primary teacher as principal of the school.

Short terms have been mentioned as a cause of retardation in the primary grades. The average daily attendance of Negro children during short terms was poor for a climate such as Florida enjoys. However, poor as it was the attendance of Negro children was better than that of white children enjoying longer terms. Longer terms were denied Negro schools on the grounds that Negro children would not attend school. The annual reports of county superintendents show that with longer terms the Negro children continue to attend school better than white children. Even so, the per cent of average daily attendance is low and is partial cause for the retardation in the primary grades.

TABLE II

GROWTH OF ENROLLMENT IN NEGRO HIGH SCHOOLS IN FLORIDA—ENROLLMENT BY GRADES

Year	9th Gr.	10th Gr.	11th Gr.	12th Gr.	Total H. S.	Per Cent in 12th Grade H. S.
1922-23	409	213	80	43	745	5.8
1923-24	465	268	113	65	911	7.1
1924-25	567	265	125	85	1042	8.2
1925-26	716	346	141	91	1294	7.0
1926-27	795	467	188	108	1558	6.9
1927-28	1006	578	318	171	2074	8.2
1928-29	1138	669	376	286	2471	11.6
1929-30	1262	755	488	339	2844	11.9
1930-31	1384	881	564	418	3247	12.8
Per Cent of Increase	238.4	313.6	605.0	848.8	335.8	

Thirty-eight counties do not operate high schools for Negroes though some of the counties included in this number have very large Negro populations. They are Baker, Bay, Bradford, Calhoun, Charlotte, Citrus, Clay, Collier, Dixie, Flagler, Gilchrist, Glades, Gulf, Hamilton, Hardee, Hendry, Hernando, Highlands, Holmes, Indian River, Jefferson, Lafayette, Levy, Liberty, Madison, Martin, Okaloosa, Okeechobee, Osceola, Pasco, Sarasota, Sumter, Suwannee, Taylor, Union, Wakulla, Walton and Washington Counties. Some of these counties should operate high schools for Negroes though not at the expense of the elementary schools.

The Negro colleges of the state are possibly hindering the development of local public high schools by enrolling high school students from counties attempting the operation of high schools. Table III below shows the number and source of these students.

TABLE III

Number of students attending high school departments of Negro colleges in Florida coming from counties having senior high schools, and from counties not having senior high schools.

1930-31 DATA:

	Florida A. & M. College	Bethune- Cookman	Fla. Normal Indus. Institute	Edward Waters	Total
Total from Counties with Senior H. S.	149	100	86	88	423
From Other Counties.....	26	4	16	8	54
Grand Total	175	104	102	96	477

It is evident from Table III that the high school departments of the Negro colleges in Florida draw the great majority of their high school students from those counties having one or more senior high schools,—88.7% of them coming from such counties. This puts them in competition with Negro high schools in the counties and is detrimental to the development of the Negro high schools. This seems a rather shortsighted policy on the part of these institutions if they hope to develop their college departments. The public high schools are the feeders of colleges and it behooves the colleges not only to not compete with them but to make every effort to encourage their development.

LENGTH OF SCHOOL TERMS

Table IV shows the average length of term in 1930-31 and 1931-32 in counties and the per cent of the counties operating Negro schools the length of term indicated.

TABLE IV

NEGRO SCHOOL TERMS

Length of Term	Per Cent of Schools	
	1930-31	1931-32
Less than 80 days.....	10%	0
80 to 90 days	23%	5%
100 to 119 days	11%	0
120 to 139 days	23%	5%
140 to 159 days	17%	5.5%
160 to 179 days	10%	80%
180 days	6%	4.5%

The median term in 1930-31 was 124 days. Ten per cent of the schools had less than four months of school and 33% had less than four and one-half months. The allocation of State funds on the teacher-unit basis rather than on the average daily attendance basis increased the terms of Negro schools in 1931-32, as shown in Table IV.

TRAINING AND CERTIFICATION OF TEACHERS

Two thousand three hundred and eighty-four teachers were employed in the Negro schools in 1930-31. Table V shows the training of the teachers employed that year.

TABLE V

TRAINING OF TEACHERS EMPLOYED IN NEGRO SCHOOLS
IN 1930-31

Training	Number	Per Cent
College Graduates	362	15
Normal Graduates	549	23
High School Graduates	910	38
Less than High School	563	24

During the 1930-31 school term 418 seniors were enrolled in the Negro high schools of the State. If upon graduation they could have been substituted, as fast as possible, for those teachers who possessed less than high school training the standard and quality of training should have been appreciably improved.

Table VI shows the certification of teachers employed in 1930-31, the decrease in low grade certificates and the increase in Graduate State Certificates since 1923-24.

TABLE VI

*CERTIFICATION OF TEACHERS EMPLOYED IN NEGRO
SCHOOLS 1930-31

Year	None or Temporary Per Cent	Third Grade Per Cent	Second Grade Per Cent	Grad. State Per Cent
1923-24	12	33 1/3	37	1 1/2
1924-25	21	28	33	3 1/2
1925-26	32	24	24 1/2	7 1/2
1926-27	27	23	26	11
1927-28	22	22 1/2	28	15
1928-29	18	22	30	18
1929-30	13	20	29	18
1930-31	17.6	17	31	23 1/2

*Several grades of certificates are not listed here.

It is encouraging to observe the increasing percentage of Graduate State Certificates among negro teachers. It is discouraging to observe the percentage of Temporary Certificates used annually by negro teachers. It seems feasible that the granting of Temporary Certificates to Negroes having less than high school graduation could be discontinued and that no teacher should be granted a second Temporary Certificate except upon evidence of attendance at a standard college for a period of two months or longer annually and the successful completion of courses taken and successful teaching experience.

ANNUAL SALARIES PAID TEACHERS

The training and certification of Negro teachers are not praiseworthy levels of accomplishment within themselves but when they are contrasted with annual salaries paid teachers the educational qualifications are due nothing less than complimentary remarks. Table VII shows the annual salaries of negro teachers in 1930-31 and the per cent of teachers receiving each size salary.

TABLE VII**ANNUAL SALARIES PAID TEACHERS 1930-31**

Amount Paid Annually	Per Cent of Teachers
\$ 100 to \$ 200	24
200 to 300	10
300 to 400	12
400 to 500	18
500 to 750	24
750 to 1,000	9
1,000 to 1,250	2
1,250 and above	1

Comment on this table is superfluous. As long as such low salaries are paid, high qualifications can hardly be expected. These salaries were paid when county officials received state aid on the average daily attendance basis. The allocation of state funds to counties on the teacher unit basis has improved this condition.

Graph II shows the per cent of state funds for negro schools actually spent for negro schools by each county in 1929-30.

Table VIII and Graph III are taken from "Financing Schols in the South, 1930" by Fred McCuiston, Proceedings of the Conference of State Directors and Educational Research in the Southern States, December 5 and 6, 1930.

Graph II

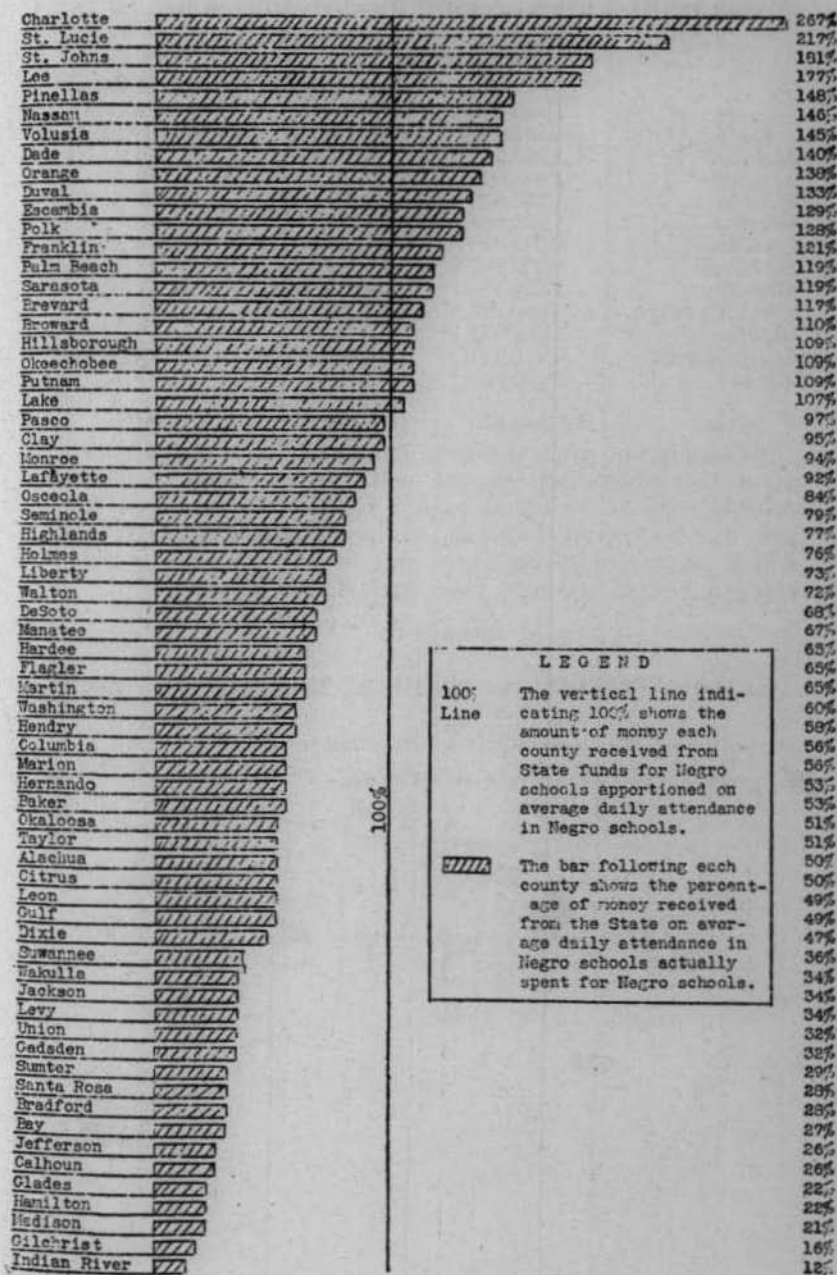

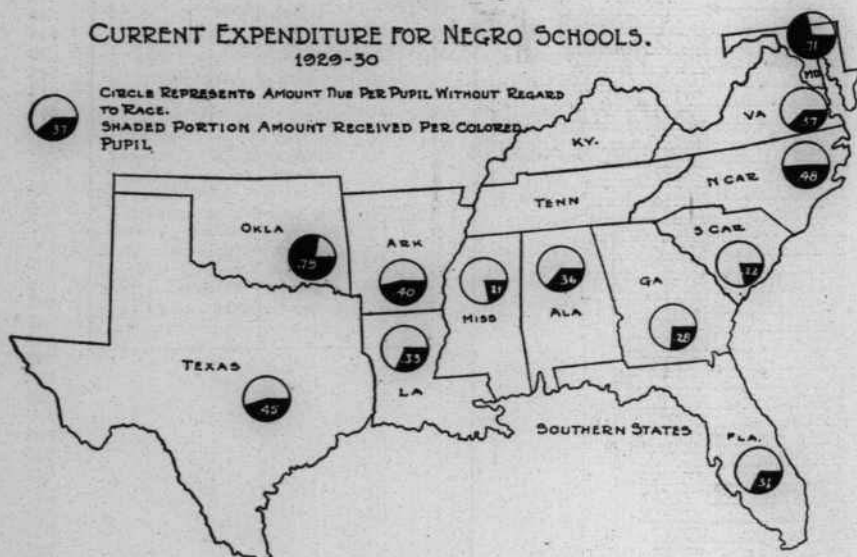

TABLE VIII
SUMMARY OF EXPENDITURES IN COLORED SCHOOLS IN
THE SOUTHERN STATES
1929-30

State	Total Expenditures	Additional Amount on Equal Basis	Per Cent of Equal Expenditures Rec'd by Negroes
Alabama	\$ 1,964,524	\$ 3,315,946	.36
Arkansas	1,443,306	2,141,680	.40
Florida	1,302,623	2,881,090	.31
Georgia	1,667,884	4,273,514	.28
Louisiana	2,542,213	5,028,664	.33
Maryland	2,230,857	912,928	.71
Mississippi	1,583,541	6,015,099	.21
North Carolina	4,086,792	4,409,217	.48
Oklahoma	1,657,544	432,544	.79
South Carolina	1,718,854	6,056,927	.22
Texas	3,263,821	4,020,443	.45
Total	\$23,461,959	\$39,688,052	.37

"Column one gives the total amount spent. Column two gives the additional amount which would have gone to colored schools on equal basis. Column three shows the per cent of funds represented in columns one and two which was actually received, and it may be read as representing cents received from each dollar due."

JEANES AND SLATER FUNDS DISBURSEMENTS

Tables XIV and XV show the distribution of the Jeanes Fund and Slater Fund appropriations during the biennium 1930-32. The aid from the Jeanes Fund is used to help county school officials in employing supervisors who assist the county superintendents improve the Negro schools.

The aid from the Slater Fund is used to help county officials develop high schools for Negroes.

TABLE XIV.**DISBURSEMENTS OF AID FROM THE JEANES FUND**

County	Amount of Aid	
	1930-31	1931-32

NEGRO COLLEGES

Table XVI shows the enrollment and classification of students in the State four-year college and the three private junior colleges. It appears that the private colleges are contributing very little to the training of teachers for the State. The State College contributed 87% in 1930-31 and 90% in 1931-32 of the teacher training done in Florida Negro colleges. The increase in the enrollment in the summer school of the State College is an index to the service which that institution is rendering in improving teachers in service. The State college enrolls more college students than high school students, whereas the private colleges enroll more high school pupils than college students. The latter must follow the lead of the State institution if they hope to be classified as colleges rather than preparatory schools.

The southern states enroll 17 college students for every 10,000 Negro inhabitants. Florida is far below this average with only 12 college students per 10,000 inhabitants.

The cost of operating the State College goes largely into teachers' salaries or instructional costs. About 67% of the income of the State college is spent for this cost which is the average for 19 white institutions of higher learning surveyed by Reeves and Russell. It seems that too small a part of the income of the private institutions is spent on teachers' salaries. Also, it seems that for the total expenditures of the private colleges, which are ultimately paid for by the public, a greater service should be rendered the State in the training of teachers for the State.

CHAPTER V

PHYSICAL AND HEALTH EDUCATION

The success of a program of physical and health education is dependent upon many factors in and out of school. Wholesome living behavior on the part of individuals and the community is the final test of the success of the program. The public should not be satisfied with anything short of this goal.

The magnitude of the job before physical and health education and the many factors with which the program must be integrated, is shown by consideration of the following points:

1. The teaching of physical and health education in the elementary grades must be done by all elementary teachers many of whom will need additional training for this work.
2. The high school teaching will be done by teachers with specific physical and health education training since specific training is required of all other high school subjects. Many teachers need this training because the training courses have just recently become available.
3. The teaching must present a program or way of living so that individuals and groups will desire to improve standards of living. The task-assigned recitation method of teaching will not serve the purpose.
4. Health teaching is closely connected with home life because most of the health habits are performed at home.
5. Improvement in living habits is more rapid and sustained in communities that have public health programs.
6. Health examination of the school child and the correction of defects calls for cooperative effort of physician, dentist, nurse, teacher and parents.
7. Some parents will not be able to pay for having their child's defects corrected. The school and the county welfare unit must cooperate in the investigation as to which parents need the aid furnished through the unit.

The physical education program does not require the cooperation of as many organizations. Since the program includes athletics and has as one goal the wholesome recreation for all in the community, it is necessary that the school shall keep the public informed about the plans and purposes of the program. The community must be led to understand that the physical, social, moral and cultural well-being of youth is the true aim of school athletics and many fruitful lessons are learned by the individual through playing the game whether it is won or lost. Other yardsticks than the winning of championships must be used by the public to measure the success of the coach or the school athletic program if we are to realize the educational aim of athletics.

One important factor in the realization of this aim is the provision of trained teachers for the physical and health education program. Cooperation of the teacher training institutions is necessary if we are to supply the schools of Florida with teachers who have the ability and vision to attain this aim.

The cooperation and understanding of principals and superintendents is necessary. New principals can secure training in the administration of athletics and physical and health education through courses now offered at state teacher training institutions. Principals now in service will, in most cases, obtain a progressive viewpoint in regard to athletics through contact with the Florida Athletic Association.

The efforts of the State Supervisor of Physical and Health Education during the past biennium have been directed toward contacting with the most practical and serviceable groups, individuals and organizations of every community in the state that might aid in the development of the physical and health education program. In many cases these efforts have borne fruit, and in practically every case seeds have been sown that will ultimately assist in the realization of the aim set up for the program.

During the last year of the biennium the State Supervisor of Physical and Health Education assumed the duties of the Supervisor of High Schools who was released from high school supervision duties during this period in order to direct the curriculum revision program for Florida. The statistics for the high school accreditation during this year are included in the report of the high school supervisor. During this year of the biennium the physical and health education supervisory duties were performed as high school

supervision duties permitted and during the supervisor's free time.

This experience as acting high school supervisor was valuable since a broader vision of the entire school program was gained. This experience in general supervision should aid in the integration in the physical and health education program as a more definite part of the educational program.

The supervisor served as state chairman of the physical and health education curriculum revision committees. He held many conferences with teachers and teacher training groups. Cooperation of a large number of teachers was secured in the production and revision of the physical and health education material for the new course of study. This cooperative effort of teachers and the teacher training groups served to promote a better understanding of the teaching of physical and health education in the schools of Florida.

A summary of the supervisor's activities for the biennium follows:

Activities*	Total No.
Addresses to teacher groups	31
Addresses to teacher-training groups	38
Addresses to student and community groups	11
Addresses to health and welfare P. T. A. groups.....	5
Conferences with teacher groups	19
Conferences with teacher-training groups	28
Conferences with P. T. A. officers and groups	10
Conferences with curriculum groups	43
Conferences with health and welfare groups	33
Conferences with county superintendents	94
Conferences with county supervisors and nurses.....	66
Meetings attended:	
District and State Educational	20
County Educational	14
National Educational	5
County Boards of Education	9
Health, Welfare and P. T. A.....	10
Demonstrations and Play Days attended	9
Visits to universities and colleges	23
Summer schools attended for additional training	1
Visits to elementary schools	117
Visits to high schools.....	169

*The following positions held by the supervisor indicate the effort made to work with other groups interested in child improvement: (1) Vice-President, Southern Division American Physical Education Association, 1931-32; (2) President-elect, Southern Division American Physical Education Association, 1932-33; (3) Treasurer, Florida Health, Welfare and Education Council,

1930-32; (4) Secretary, Florida Physical Education Association, 1930-32; (5) Convention Manager of Southern Division, American Physical Education Association, 1932; (6) State Chairman of Physical Education, Parent-Teacher Association, 1930-32; (7) Delegate to White House Conference for Child Health and Protection, 1930; (8) Chairman, Physical and Health Education Curriculum Committee, 1930-32; (9) Chairman of Education and Training Section of Florida Health, Welfare and Education Council, 1930-32.

The progress of the physical and health education program during the biennium for the sake of clarity is described under the following heads:

1. The Physical and Health Education Score Card

A decided increase is shown in the number of counties scoring schools by using the physical and health education score card. This score card outlines an excellent health and physical education program for the elementary school and the high school. The principals of the schools, even though this is not a required report of the State Department of Public Instruction, have used this score card as a self-rating blank for the school health and physical education program. For the school year 1928-29, 27 counties were listed as scoring some of the schools. This was increased for the school year of 1931-32 to 64 counties, an increase of 137 per cent. In 1928-29 a total of 321 schools were scored. For the last year of this biennium this total was raised to 638 schools, an increase of approximately 100 per cent.

The quality of the work done in the schools is reflected in the average county scores given in the following tables. A study of these tables will show a definite trend to a higher score. This improvement is illustrated by the following sampling. Out of a possible six hundred points listed on the score card, Palm Beach County shows an increase in the average score for the high school program of 366 for 1927-28 to 482 for 1931-32. A similar increase is shown in the average score for the elementary schools of this county. The increase in this case was from 418 in 1928 to 513 in 1932.

Scored		27	35	42	64

It is interesting to note the consistency in scores given the schools in some counties. This indicates that an effort was made by the county superintendents to administer the physical and health education program in accordance with accepted standards for such work. The low scores given for many of the schools is due to the fact that most of these schools are in the rural sections where meager provisions are made for this program. The need of a more definite effort on the part of the county superintendent and the part of the County Board of Education to improve the health environment and program is indicated by these low scores.

Teacher Training in Physical and Health Education

Probably the most important improvement in the physical and health education program is shown by the increase in the number of teachers seeking training in physical and health education. This is true of both elementary and high school teachers. Training courses in physical and health education are now being offered at all institutions in the State which offer training for teachers. These courses are offered during the regular school year as well as in summer school sessions. An enrollment of 575 teachers in physical and health education courses for the University of Florida Summer School in June, 1932, is an indication of the large number of teachers seeking this training.

Some of this increase is due to the regulations of the State Board of Education requiring three semester hours training in health education and two semester hours in physical education for all elementary grade teachers. A total of 18 semester hours training in health and physical education is required of all high school health and physical education teachers. These requirements are listed in the 1932 edition of the Handbook for Teachers.

Added impetus to teacher training and physical and health education was given by the following regulation adopted by the State Board of Education, January 14, 1932. "Beginning with July 1, 1933, a person will be required to have 'Physical Education' on the face of his certificate in order to teach that subject or to coach the interscholastic athletic teams in an accredited high school." This regulation is very important because it requires physical education training of all high school teachers that coach interschool athletic teams. Teachers who have had

training in physical education are much more likely to conduct athletic contests so that educational aims will be realized.

The physical and health education training courses at the University of Florida and Florida State College for Women which offer four years of undergraduate training for prospective high school teachers continue to show improvement in content and enrollment. The limited number of young men and women graduating each year with this training are being absorbed in the Florida high schools. It is interesting to note that the number of special health and physical education teachers in the Florida high schools increased from 99 for the school year 1928-29 to 132 for the school year 1931-32. This increase is exceptional since during this period there has been a definite effort to curtail school expenditures and reduce the number of teachers employed.

In-service training for teachers is offered through the Extension Division of the University of Florida. That teachers have availed themselves of this opportunity has been shown by the fact that 1331 have received this training during the period from 1928 to March 1, 1931. Only 171 of this total took their training through correspondence courses. Some excellent work in teacher training was done through the extension courses. The training was definitely integrated with the daily teaching program of the teachers enrolled in these classes. Teachers who would not otherwise have been able to get training in health and physical education were benefited by the extension training program. This training should be maintained until the great body of teachers now in service can receive some training in physical and health education.

The Health Service Program

Some improvement has been shown in this important phase of the health education program. A study of the physical and health education score cards submitted by the counties shows that about 62% of the children suffer from at least one defect. It is estimated that about 60% of these defects can be corrected. The reports of the State Board of Health indicate that about 27% of the children suffer from hookworm infection. A malarial survey conducted in some schools shows 40% of the children with enlarged spleens which is an indication of malarial conditions. The main purpose of the health service program should be to

make the examinations of the children and conduct a follow-up program that will secure the correction of these defects.

In some counties of the state the health service program is organized on the basis suggested by the report of the joint committees of the American Medical Association and the National Education Association. A few of the counties in Florida have nurses employed by the County Board of Education. In a few of the other counties the cost of the nursing service is borne jointly by the County Board of Education and the County Commissioners. Three counties in the state maintain county health units which have contributed to this program. In spite of the limited staff of nurses and physicians, some excellent work has been done in the state. Much of this has been made possible by local Parent-Teacher organizations. Donation of services by dentists and physicians and voluntary contributions by other civic groups have been made. The district doctors of the State Board of Health have been able to give some time in the examination and immunization of the school children.

Provision of a reasonable health service for each county from school funds is sound economy. Through such a program a community can remove the defects which impair the child's progress and reduce the number of absences from school due to illness. This, of course, will result in the reduction of the number of school failures.

Another indication of progress in this phase of the program is shown by the large increase in the number of schools and counties in making use of the Blue Ribbon Program. This program is being temporarily promoted by this division in order to increase the interest of the child and his parents in the correction of defects. A certificate is furnished by the State Department of Public Instruction for the children to attain a certain standard of physical excellence. There has been a large increase in the issuance of these certificates.

The health service program will not be a complete success unless the cooperation of the people in the community is secured. This cooperation can best be secured through the efforts of the county superintendent and county Board of Education in cooperation with all groups in the county that can contribute to improving conditions. Hookworm cannot be stamped out by merely dosing the children. Sanitary facilities must be provided for all homes and schools so that the danger of soil pollution will be removed.

The school should cooperate with the public health groups in educating the people to use proper precautions to prevent the spread of malaria. By intelligent effort on the part of all in the community it is possible to stamp out hookworm and reduce malaria cases to the minimum.

New Course of Study

A unique and important place was given physical and health education in the state curriculum revision program. Physical and health education is more definitely integrated with other phases of the elementary school program. Every effort was made to interweave the activities and content of the physical and health education program with all other school programs so that this phase of the school work will no longer be considered as a special subject or an extra-curricular activity. Excellent cooperation was given by hundreds of teachers throughout the state in producing and trying out material for the program. The physical education department of the University of Florida and the Florida State College for Women gave valuable assistance. Miss Fannie B. Shaw of the Extension Division of the University of Florida rendered excellent service, as a member of the state committee. The extension classes taught by her in several sections of the state made many contributions in the production of health education units. Dr. C. L. Brownell of Teachers College, Columbia University, served as special advisor, and Dr. Doak S. Campbell and Dr. H. L. Caswell of the Division of Surveys and Field Studies, Peabody College, consultants for the general curriculum revision program, gave valuable assistance in integrating physical and health education as a definite part of the school program.

The tentative course of study in physical and health education for the elementary school grades which was prepared by the supervisor in 1930, was used as a basis for the new course of study in physical and health education. This tentative course was given an intensive try-out in Duval, Lee and Leon Counties. The teachers of these counties cooperated in the try-out, criticism and revision.

Meetings of Important Organizations

During this biennium some important conventions were held in Florida. These conventions made valuable contributions to the physical and health education program

since each organization has as its goal the improvement of child life.

The Southern Division of the American Physical Education Association met in Jacksonville, Florida, March 31 to April 2. This meeting was held in conjunction with the Florida Education Association Convention. The Southern Division of the American Legion held an important child welfare conference in Jacksonville, February 12 and 13, 1932. Two important meetings of the Florida Health, Welfare and Education Conference were conducted at Haines City and Gainesville. These meetings were important because they offered a common meeting ground for the health welfare and education groups to discuss joint problems. The professional and voluntary state-wide organizations joined in this conference. Plans were made to promote in each county a similar council for the improvement of living conditions. These county councils are to study all phases of education, health and welfare by making a survey of local conditions and investigating the excellent reports of the White House Conference on Child Health and Protection. As the study of the county group progresses it is expected that each community will make improvement in its health, welfare and education program.

These conventions brought to Florida several outstanding leaders in the fields of education, health and welfare. The messages brought by these leaders were well received by the professional workers and many groups of citizens. Among this group of leaders were: Dr. Jesse Feiring Williams and Dr. C. L. Brownell of Teachers College, Columbia University; Fielding H. Yost of University of Michigan; Hugo Bezdek and Dr. Craig Davis of Pennsylvania State College; Dr. F. J. Kelly, Office of Education, Washington, D. C.; James Edward Rogers, National Recreation Association; Miss Anne Hodgkins of the National Amateur Athletic Federation; Dr. David Brace of University of Texas; Miss Emma C. Puschner, Welfare Director of the American Legion; Mrs. Walter McNabb Miller of the American Child Health Association; Dr. H. E. Barnard, Director of the White House Conference on Child Health and Protection.

This group of leaders interpreted to public and professional groups the many phases of the physical and health education program. The inspiration and vision given should bear fruit in improved community living.

CHAPTER VI

TRADE AND INDUSTRIAL EDUCATION

TRADE AND INDUSTRIAL EDUCATION

The statement, "Florida does not need more mechanics but to improve the quality of the so-called mechanics already here," appearing in the Educational Survey Commission's Report of 1928 has been much more obvious during the biennium than at any other time.

The general reduction of industrial man power on account of economic conditions has required a "face about" in the industrial training program of the State. The outgrowth of force reduction is reflected in:

(1) A greater need for training to meet job adjustment. Many men have had to extend their knowledge and skill to fit into combination jobs which were heretofore done by men of greater specialty and less all-round training.

(2) A need for re-training a large number of workers whose jobs have been lost entirely in the efforts of industry to retrench.

(3) A need for continuing or part-time trade training for those who have been temporarily halted in attainment of the journeyman rank.

(4) An increased desire for training on the part of the fortunate who have been able to hold their jobs, but who realize the necessity of continuous progress to meet the keen competition they face in holding these jobs.

Meeting the needs thus presented represents the trend of vocational trade and industrial education during the biennium.

Other phases of the program, such as the training for new workers, and part-time training for employed young workers has continued without interruption with the exception of the influence of the unemployment situation.

The efficiency of all day training of preparatory nature for young men and women is naturally less when there is a decreased opportunity for entrance into the trade immediately after desirable levels of trade ability have been reached. Such conditions obtain in an era of general unemployment like the present one.

In some cases jobs for young workers have been discontinued; in other cases such jobs have been given to the heads

of families with whom the anxiety incident to family support is greatly increased. While there has been an increase in enrollment of young workers it has been necessary to adjust the training according to the effect of the influences mentioned above.

Expansion of the program as to industries has been gratifying. During the biennium the service of the department has been received in establishing training in the following trades and industries—cleaning and dyeing, hotel and restaurant, barbering, beauty culture, fire fighting and ice service.

The cleaners and dyers of Jacksonville, Fort Myers, St. Petersburg, Lakeland, Bartow and other smaller cities conducted short unit courses on the problems of that industry.

Miami, Fort Myers, Daytona, carried on successful training programs for hotel and restaurant workers in preparation of many who had lost jobs to enter a new field. Maid, bell boy, houseman, switchboard operator and dining room and table service is indicative of the training accomplished with this industry.

In cooperation with the State Barber Board and other agencies and individuals a good program of trade extension study for barbers has been inaugurated. Barbers in the following named cities have received the benefit of the instruction—Tampa, Clearwater, Bradenton, St. Petersburg, Plant City and Lakeland.

Jacksonville has organized a beauty culture training course for young women who wished to enter this field of service. All-day training has been given. A good employment and operating record for those who have completed the training has been established, indicating the need for and success with the plan.

In the ice industry and fire departments the extent of participation has been that of giving instructor training and class organization helps.

In the training programs organized during the biennium the true spirit of the Smith-Hughes or National Vocational Education Act has been fulfilled in that a three-way interest or cooperation has been manifest throughout; namely, the employer, the employee and the school. As an illustration of this cooperation the following is cited from the hotel industry. Hotel Men's Associations and hotel managers or owners have cooperated in the selection and placement of trainees, the provision of facilities for training and the selection of instructor.

Tabular statements of the activities of this division of the Department of Vocational Education appear below:

1931-32	5485	118	43,251.01

CHAPTER VII

AGRICULTURAL EDUCATION

Vocational Agricultural Education continues to make a consistent growth, both in number of departments and pupils enrolled, as indicated by the following statistics.

During the fiscal year, 1929-30, there were forty-seven teachers with an enrollment of 1921 pupils; in 1930-31, there were fifty-one teachers and 2413 pupils, and during the fiscal year, 1931-32, fifty-five teachers with an enrollment of 3374 pupils.

We feel that this continued growth in the face of economic depression is indicative of the value of vocational agriculture to the communities where departments are located. Further, since vocational agriculture is not required either for graduation from high school or for college entrance, but is offered in the high school curriculum as a pure elective, the continued growth in number of departments is indicative of the fact that the subject of vocational agriculture is filling a definite need in the curriculum of the high schools located in the agricultural centers of Florida.

A conscientious effort has been made to expand the program to meet the needs for vocational agricultural education in Florida. In an attempt to meet this need during the biennium drastic reductions in teachers' salaries have been made and at the same time the average pupil load per teacher has been increased by thirty-three per cent. Further reduction in salaries or increase in the teachers' load is impossible if the efficiency of the program is to be maintained. Therefore, if the growing demand for vocational agricultural education is to be met, during the ensuing biennium, it will be necessary for the State Legislature to match every available Federal Dollar allocated to Florida for this purpose.

Larger Percentage Part-Time Classes

According to statistics, given out at the Southern Regional Conference held for Vocational Agricultural Workers in Washington, D. C., March 7-12, 1932, there was a greater percentage of the teachers of vocational agriculture

in Florida who were teaching Part-Time classes during the fiscal year, than in any other State in the South. These classes are organized for boys who have dropped out of school and are actually engaged in farming. This statement is significant in that it shows the extent to which Florida, in comparison with other Southern States, is filling this need for the training of the farm youth in the "business of farming."

Supervised Practice or Project Work

All pupils enrolled in vocational agriculture classes are required in addition to their regular classroom work to carry out at least six months of supervised practice work. This supervised practice or project work is generally done on the pupil's home farm, under the supervision of the teacher of vocational agriculture.

During the biennium the pupils enrolled in the vocational agriculture classes have carried out their supervised practice or project work in almost every conceivable field of agriculture in the State, including citrus, field crops, truck crops, floriculture, dairy cattle, beef cattle, hogs, poultry and bees.

The total labor income from this project work was more than the total cost of the salaries of all the vocational agriculture teachers in the State, for the same period of time. The following data bear out the statement that vocational agriculture education in Florida is paying for itself.

The total amount of Local, State and Federal funds expended in payment of teachers' salaries amounted to \$115,809.25 during the fiscal year, 1929-30. During the same fiscal year the total labor income from the pupils' supervised practice program amounted to \$157,662.41. This shows a return of one dollar and thirty-six cents for each dollar expended.

During the fiscal year, 1930-31, there was \$124,913.34 expended for teachers' salaries and \$197,689.31 returned in pupils' project labor income from their supervised practice program. This shows a return of one dollar and fifty-eight cents from supervised practice work, carried on under the supervision of the vocational agriculture teacher, for each dollar invested in teachers' salaries.*

*Note: Figures for 1931-32—Pupils Project Labor Income—not yet available.

Training Vocational Agriculture Teachers

The teacher-training work for white vocational agriculture teachers is carried on at the University of Florida, under Dr. E. W. Garris, as teacher-trainer. For negroes, this work is carried on at the Florida A. and M. College, with R. L. Reynolds as teacher-trainer.

In both these teacher-training institutions the "seniors" or "trainees" do their practice teaching in regularly established high school departments of vocational agriculture under a regular teacher of vocational agriculture.

Professional Improvement

For the fiscal year, 1931-32, there were fifty-five teachers of vocational agriculture located in thirty-one counties of the state. Forty of these teachers are white and fifteen are negroes.

All of the forty white teachers are four-year college graduates and hold graduate state certificates. Of this group, thirty-three have attended one or more eight week Summer Schools for professional improvement and thirteen have received their Master's Degree.

All vocational agricultural teachers belong to the Florida Agricultural Teachers Association, the Florida Vocational Association, and the Florida Education Association, and a number also belong to the American Vocational Association and the National Education Association. They all receive the Journal of the Florida Education Association and the national Agricultural Education Magazine. Both of these are purely professional magazines.

Two or more district conferences, of one day's duration each, and one State Conference, of a week's duration, are called yearly by the State Supervisor of Agricultural Education. These conferences are for professional improvement and are attended by 100% of the teachers of vocational agriculture.

Four Units of Vocational Agriculture Recognized for College Entrance

In recognition of the professional training of the teachers and the efficiency of their instruction, the Entrance Requirements Committee of the University of Florida has passed a regulation raising from one to four, the number of units of high school agriculture which may count for college entrance. These four units may be used as free

electives for entrance to any of the colleges of the University of Florida. This regulation became effective at the beginning of the second semester of the school year, 1931-32.

School Beautification

The Beautification Committee of the State Chamber of Commerce is sponsoring a State Wide School Beautification Program. Mr. H. E. Wood, Assistant State Supervisor of Agricultural Education, has been appointed to represent the State Department of Education in this work.

The teachers of vocational agriculture have been particularly active in connection with beautifying the grounds of their respective schools and in a number of instances they have been responsible for beautifying the grounds of all the schools within the county. A particular instance of the latter is to be found in Osceola County, where according to County Superintendent Brammar, the responsibility for the propagation of the ornamentals and the planning and planting of all the school grounds in the County has been assumed by the teacher of vocational agriculture at St. Cloud.

Future Farmer Work

The development of the Future Farmer organization during the biennium has been very gratifying. This organization is composed of boys who are regularly enrolled students in vocational agriculture classes.

The purposes of the organization as outlined in the constitution are:

- (1) To promote vocational agriculture in the high schools.
- (2) To create more interest in intelligent agricultural pursuits, in the various counties of the State.
- (3) To create and nurture a love of country life.
- (4) To provide recreational and educational entertainment for students in vocational agriculture through state agricultural and athletic contests, vacation tours, father-and-son banquets, and the like.
- (5) To promote thrift.
- (6) To afford a medium for cooperative marketing and buying.
- (7) To establish the confidence of the farm boy in himself and his work.
- (8) To promote scholarship.
- (9) To develop rural leadership.

Through various activities sponsored by the local, State and National F. F. A. Chapters an effort is made to reach each of the above listed objectives of the Future Farmer organization.

For instance, public speaking is one of the activities sponsored for the purpose of reaching the objective of "training for rural leadership." In order to make the activity effective, so that each member of the organization may receive some benefit, this public speaking activity is conducted as a contest in the following manner:

The local Future Farmer Chapter in each department of vocational agriculture has a Public Speaking Contest, with each member of the local chapter competing. The winner then represents that chapter in the District F. F. A. Public Speaking Contest. There are six of the District Contests in various parts of the State, and the winners in these six District Contests, represent their Districts in the State F. F. A. Public Speaking Contest. This State Contest is held each summer in the auditorium of the University of Florida and the boys' speeches are broadcast over radio station W. R. U. F. The winner in this Contest represents Florida in the Southern Regional F. F. A. Public Speaking Contest and the winner there represents the South in the National F. F. A. Public Speaking Contest which is held each year in Kansas City at the time of the National Congress, Future Farmers of America.

The Seminole Future Farmer Chapter of Sanford has won first place in the State Chapter Contest for the past two years and this year won "Honorable Mention" in the National Contest.

For the past two years we have had the honor of having one of our Future Farmers place first in the National Essay Contest, sponsored by the American Royal Live Stock Show. These boys were Joe Blake of the Gonzalez Chapter and Norton Wilkins of the Apopka Chapter.

Each year the President of the Florida Association, Future Farmers of America, has been honored by being awarded the "American Farmer" degree at the National Congress in Kansas City. This is the highest degree in the National organization and is awarded in recognition of outstanding achievement. The Florida boys thus honored were Woodrow O'Steen of Aucilla, President of the Florida Association, 1930-31, and Norton Wilkins of Apopka, President of the Florida Association, F. F. A., 1931-32.

A three-day State Convention of the Florida Association, Future Farmers of America, was held at the University

of Florida June 28, 29, 30, 1932. Approximately three hundred boys attended this meeting and participated in the activities scheduled on the program. We feel that by holding this meeting at the University of Florida while Summer School was in session we made it possible for some two thousand public school teachers to familiarize themselves with the aims and objectives of the Future Farmer organization and its connection with vocational agriculture.

With an active Future Farmer Chapter in each department of vocational agriculture striving to meet the objectives as set up in the Constitution, it is readily understood what a vital part the Future Farmer organization plays in the success of vocational agriculture in the high schools of Florida.

Florida is primarily an agricultural state and there are great possibilities for improvement and progress along agricultural lines. It is a recognized fact that in the future only the intelligent, well trained and efficient farmers will be able to succeed at the business of farming. Thus it becomes the function of the departments of Vocational Agriculture in the high schools of the state to train our "Future Farmers."

CHAPTER VIII

HOME ECONOMICS EDUCATION

In accordance with the program of studies for high schools in Florida, one year of home economics is given in the accredited high schools. The required unit in home economics is a "survey" course covering the problems in home making and home living. The course should give a girl a point of view in recognizing the many problems in the home and her share of responsibility to the home and as a member of the family. Information is gained in the study of the different phases in home making and some skill may be developed.

Many schools offer two or three years of home economics. The vocational day school program is a two-year program. The second and third year home economics comprises elective units in certain phases of home making, which give an opportunity for more intensive study, and an opportunity for developing some skill in each of these phases of home making.

Supervised home projects is a part of the vocational program. The immediate application of the principles learned in the classroom and laboratory to a "job" in the home makes economics more dynamic and it helps the girl and the teacher to better evaluate the results of instruction.

"There has been evidence for many years that certain national defects are traceable in a large part to home conditions that in many instances are not a result of insufficient income, but undesirable standards of living; such as unsatisfactory food, clothing, plans for expenditure of income, management, care and training of children, family relationships, sanitary conditions in homes, and unsatisfactory and deficient information for disease prevention.

"When the home and industry were one and the same institution living was simple. For the last quarter of a century, and even longer, an effort has been made to define the home and its functions under the new industrial and commercial regime. This study continues but certain conclusions have been reached, namely: That the successful discharge of essential responsibilities in homes and home life today calls for the possession of certain information, appreciation abilities, and habits that can rarely, if ever, be ac-

quired in the home, even with great difficulty and at large cost." (Adapted from Bulletin No. 151 Vocational Education in Home Economics—Federal Board for Vocational Education.)

Two other programs in vocational home economics education is the Part-Time program and the Evening School Program.

The Part-Time program is for employed girls 16 years of age or over. The girls receive training in home making and home-living while employed. They may attend classes for one or more hours a day to one or more hours per week, depending on the time the employer can allow them for such training. This training should prepare the girl to be a better member in the home and society, and indirectly better prepares her for her job.

The Evening School program is extended to women and girls over 16 years of age. Short unit courses of six to eight weeks, in various phases of home making, as: Food and Nutrition Problems of the Family; Clothing Problems; Child Care and Development; Home Management; Applied Art in the Home; and Personal Hygiene and Home Nursing are given for two hours once or twice a week at the time of day best suited to the group. "The Evening school instruction must be given to those whose work is such that the skill or knowledge taught helps the worker in her present-day employment to greater efficiency as a home maker, or to better wages, or promotion as a household employee. This will admit to such classes those who are engaged to any extent or in any way in the performance of household duties."—Bulletin 151.

Certain requirements are set up for attendance and quality work done in the short unit courses. A certificate is given to those who have satisfactorily met these standards. In some instances this certificate has been the means of one getting or maintaining a job.

Teacher Training

The Florida State College for Women is the approved teacher-training institution for home economics.

The enrollment of home economics "majors" has increased considerably in the past biennium.

Each trainee during her senior year does practice teaching under supervision of forty sixty-minute lessons, for a consecutive eight-week period, and observes eighteen sixty-minute lessons in Leon High School or Florida High School.

She also spends six weeks in residence in the Home Management House under the supervision of the home economics staff, practicing the many homemaking jobs in family groups.

The State and Federal vocational funds participate in half of the salary of the Associate Professor of Home Economics Education and in some of the expense for travel to enable her to do some itinerant teacher-training in the interest of "following up" the girl's ability "on the job" and to acquaint herself with conditions in the "field."

Home Economics Education for Negroes

At the close of this biennium there are 33 home economics departments in high schools and 36 teachers. Of this number, 13 schools have the vocational program receiving State and Federal aid. The increase over the last biennium is 11 vocational schools, 10 departments, and 8 teachers.

An evening school program was held in one county in 1931-32. Three teachers were used, giving courses in Homemaking and Maid Service to 497 women. Of this number 304 received a certificate for meeting certain standards, one of which was 100% in attendance.

A two-week (53 clock hours) teacher-training course was given at Florida Agricultural and Mechanical College in June, 1932, under the direction of the State Supervisor of Home Economics Education, assisted by an agent from the Federal Board for Vocational Education Home Economics Service. Forty-four home economics teachers (a few Jeanes teachers) attended this conference full time.

A half-day District conference was held October, 1931, by the State Supervisor of Home Economics Education and assisted by a Federal Agent. Twelve teachers and three principals attended this conference.

The State Supervisor of Home Economics Education visits the departments and meets with teachers and principals during the year and makes such recommendations as seem desirable for improving the work.

The State Supervisor cooperates with the State Agent for Negro Education in the interest of adding home economics departments in schools and in the interest of promoting and improving education for negroes. With the aid of Rosenwald and Slater funds, several counties have supplemented these funds and added home economics to the school program.

Florida Agricultural and Mechanical College is approved for teacher-training in home economics education. A five room Home Management House was added in 1931-32. This gives the home economics trainees an opportunity to "practice," under supervision for eight weeks, all phases of home-making. Each trainee also has practice teaching under supervision, observing 40 lessons and teaching 30 lessons.

The home economics "majors" have more than doubled in the past biennium in the regular and summer session enrollment.

In 1931-32 the Dean of the School of Home Economics, who is also the Teacher-Trainer, did some itinerant teacher-training, visiting teachers on the job to learn wherein the trainee may be better prepared for her job; as well as to learn problems in the field. The State and Federal vocational funds participate in the salary and travel for the Teacher-Trainer.

CHAPTER IX

VOCATIONAL REHABILITATION

The purpose of the vocational rehabilitation service conducted by the Department of Public Instruction is to provide the vocational guidance, vocational training, and some other incidental services needed by physically handicapped persons to enable them to engage in remunerative employment. It is extended to all feasible applicants above sixteen years of age who are vocationally handicapped by reason of permanent disabilities caused by accident, disease, or congenital deformities and who are not already trained or satisfactorily employed. The service is handled on the case work method by the State Supervisor of Vocational Rehabilitation with the cooperation of local school officials, social and civic organizations and interested individuals. Training is arranged for individuals in accordance with their abilities. This training is provided in existing public and private schools, in industrial and commercial establishments, by tutors and by correspondence.

The cost of rehabilitation is borne jointly by the State and Federal governments with the aid of small appropriations from a few counties.

The following paragraphs and tables relate the activities of this department during the two fiscal years beginning July 1, 1930, and ending June 30, 1932:

At the end of the fiscal year June 30, 1931, the total live roll of cases being served and under investigation contained the names of 442 handicapped persons. Of this number 112 persons were receiving vocational training; 248 persons had been surveyed for rehabilitation service; 52 handicapped persons entered employment and 36 others completed preparation for employment. Thirty persons received employment at wages consistent with their abilities and were classed as rehabilitated. These results mean much if we keep in mind the prevailing unemployment conditions and the value of a job.

These jobs had to be found at a time when jobs were at a premium even for able-bodied persons.

Salaries of those rehabilitated ranged from \$5.00 per week to \$34.00 per week. The median salary was \$15.00 per week.

Expenditures for the fiscal year ending June 30, 1931, were:

1. Administrative		\$ 5,179.78
a. Salary of Supervisor	\$ 2,841.63	
b. Salary of Clerical Assistant	825.00	
c. Travel of Supervisor	1,410.82	
d. Communication	16.50	
e. Printing	17.50	
f. Supplies—administrative	68.33	
2. Case Production and Service		14,867.72
a. Tuition, educational institutions.....	7,190.00	
b. Tuition, commercial and industrial establishments	810.63	
c. Tuition, correspondence	462.35	
d. Tuition, tutorial	898.00	
e. Instructional supplies and equipment	2,074.23	
f. Travel of trainees	900.91	
g. Artificial appliances	853.91	
h. Physical examinations	55.00	
i. Other case production expenditures	1,622.69	
3. Expenditures not Covered by Rehabilitation Act:		
a. Administrative Equipment		31.50
		\$20,079.00

Of this amount \$9,000.00 was received from the Federal Government.

Illustrative cases rehabilitated during the fiscal year ending June 30, 1931:

S. S. had become an orphan in childhood and had an attack of infantile paralysis which left her a wheel chair occupant. She had grown too old to remain in the orphans' home and was dependent on friends and charity. The rehabilitation department assumed responsibility for her training, sent a teacher to her room daily to instruct her in stenography. After taking training for a year she was employed as a stenographer in a large hospital where she could live and work under the same roof and on the same floor. She is now self-supporting.

H. S., a country boy crippled in infancy and unable to stand on his feet or walk in an upright position, was trained in watch repairing. In a little over a year he had opened a shop of his own, was earning \$20.00 a week and was paying all of his expenses. He had never before earned money by his own efforts.

J. S., who had suffered a hearing impairment which had made employment a difficult problem, was trained in lino-type operating and placed in a job at \$20.00 a week in one

year. Meanwhile his father died and left his mother dependent on J. S. for support.

At the end of the fiscal year ending June 30, 1932, the number of cases enrolled for service was 470. Of this number 115 were receiving vocational training; 71 of those registered received employment and 32 of these were rehabilitated. Forty-nine others are ready for employment as soon as jobs are available.

The average salary of those rehabilitated was \$64.58 per month.

The work of the department, while showing results equal to those of previous years, was done under tremendous difficulties because of unfavorable conditions of employment and business.

Expenditures for the fiscal year ending June 30, 1932, were:

1. Administrative		\$ 5,230.73
a. Salary of Supervisor	\$ 2,898.33	
b. Salary of Clerical Assistant	735.00	
c. Travel of Supervisor	1,431.82	
d. Communication	5.29	
e. Printing	121.57	
f. Supplies—administrative	38.72	
2. Case Production and Service		13,654.24
a. Tuition, educational institutions	5,154.25	
b. Tuition, commercial and industrial establishments	2,849.81	
c. Tuition, correspondence	312.00	
d. Tuition, tutorial	2,075.77	
e. Instructional supplies and equipment	2,349.01	
f. Travel of trainees	630.40	
g. Artificial appliances	273.00	
h. Physical examinations	10.00	
3. Expenditures not Covered by Rehabilitation Act:		
a. Equipment		4.40
		\$18,889.37

Of this total, \$9,442.48 was received from the Federal Government.

To show the effective nature of the service rendered the following typical cases are cited:

J. P., who was over forty years of age, had been blind for the last seven years. During that time his life had been spent much as that of any blind man of his age with no

definite means of earning a living. He was given training for six months in mattress making and upholstering. He established his own shop last autumn and since has earned with the aid of his blind wife an average of \$100.00 per month.

R. S., a school teacher thirty years of age, had lost her job because she had become almost totally deaf. She was not earning anything, was very despondent and full of self pity. Training in lip reading and in the teaching of lip reading enabled her to obtain employment at a salary of \$100.00 per month. She is one of the State's most loyal boosters of rehabilitation and finds new happiness in her work.

J. C., a young man of twenty years, left home in his own car in search of adventure and a job. The fascination and expense of travel soon caused him to sell his car for more funds with which to continue his journey. His money nearly gone, he decided to settle down. The alluring advertisements of a trade school induced him to go to Chicago. To preserve his funds he started via freight. One leg was left on the railroad and J. C. returned home with the other one. An artificial limb, plus the guidance and training in radio supplied by the rehabilitation department enabled him to obtain the job which he had sought with disastrous results away from home, almost in his own back yard. Today in his city hundreds of able-bodied men look with envy on his twenty a week, but John and his family need it fully as much as any of them.

A conservative estimate based upon the latest data received on the cases rehabilitated during this biennium indicates that during the next fiscal year their earnings will exceed \$30,000. But of far more importance than the dollars earned is the satisfaction obtained by the handicapped persons because of a feeling of economic and civic independence acquired through the newly found ability to earn a living. Thus it may be seen that this is an educational service that is practical, economical and humanitarian.

STATISTICAL TABLES

CHAPTER X

STATISTICAL TABLES

The following statistical tables cover the two fiscal years ending June 30, 1931 and June 30, 1932. They are made upon the most approved plans as recommended by the United States Office of Education and are based upon Annual Reports made to this office by County Superintendents of Public Instruction. They involve a vast amount of work upon both county superintendents and the statistical clerks of the State Department of Education.

All persons interested in Florida schools are earnestly requested to get their information from these tables and other parts of the report rather than from other sources, sometimes printed outside of Florida.

Summaries of our statistics are given on pages 253 and 355 of this report.

Many people are just now interested in our State school funds. A full statement of these funds, as received from the various sources, is given on pages 283 to 387 of the statistics of 1932. It will be seen that some sources of these funds are given on these pages that are not provided for in the laws of 1931. Such sources are chiefly the gasoline tax, one-fourth mill tax, and the interest on State funds in banks. These funds had been provided by the Legislatures of previous years and in a few instances were late in being collected and paid into the school fund. The only source of funds provided by the Legislature of 1931 was the Motor Vehicle License. The One Mill Tax and the Interest on the State School Funds are, of course, constitutional funds.

Our expenditures are given according to the Eight Fundamental Accounts. These tables are as full as they could well be made within reasonable limits. They give statistics for elementary, junior high and senior high schools separately and totals for the same.

Many readers will be interested only in the totals spent for all grades of schools combined. These amounts are given in the first tables for current expenses.

SUMMARY OF STATISTICAL TABLES, 1930-1931

Cash on hand at beginning of year.....\$ 4,050,381.71

RECEIPTS:

1. Revenue Receipts\$17,453,053.08

2. Non-Revenue Receipts 4,141,968.80
